Democracy, Elections, and Constitutionalism in Africa Charles M. Fombad, Nico Steytler, 2021-03-18 The third wave of democracy that reached African shores at the end of the Cold War brought with it a dramatic decline from 1990 onwards in dictatorships military regimes one party governments and presidents for life Multiparty democracy was at the core of the constitutional revolutions that swept through most of Africa in those watershed years However that wave is either losing momentum or receding or being reversed in its entirety This volume examines democracy and elections in Africa a focus motivated by two concerns First after 30 years it is important to take stock of the state of constitutional democracy on the continent The democratic gains of the 1990s and 2000s seem to be falling by the wayside with the evidence mounting that regimes are concealing authoritarianism under the veneer of elections doing so in an international context where populist regimes are on the rise and free and fair multiparty elections are consequently no longer a given It is becoming a battle to protect and retain constitutional democracy The second reason for this volume s focus on democracy and elections is that multiparty democracy is essential for the proper functioning of the state in addressing the major problems facing Africa internal conflict inequality and lack of development and poor governance and corruption The focus of this volume is thus on how competitive politics or multiparty democracy can be realized and how through competition such politics could lead to better policy and practice outcomes

Sensory Experiments Erica Fretwell, 2020-09-14 In *Sensory Experiments* Erica Fretwell excavates the nineteenth century science of psychophysics and its theorizations of sensation to examine the cultural and aesthetic landscape of feeling in nineteenth century America Fretwell demonstrates how psychophysics a scientific movement originating in Germany and dedicated to the empirical study of sensory experience shifted the understandings of feeling from the epistemology of sentiment to the phenomenological terrain of lived experience Through analyses of medical case studies spirit photographs perfumes music theory recipes and the work of canonical figures ranging from Kate Chopin and Pauline Hopkins to James Weldon Johnson and Emily Dickinson Fretwell outlines how the five senses became important elements in the biopolitical work of constructing human difference along the lines of race gender and ability In its entanglement with social difference psychophysics contributed to the racialization of aesthetics while sketching out possibilities for alternate modes of being over and against the figure of the bourgeois liberal individual Although psychophysics has largely been forgotten Fretwell demonstrates that its importance to shaping social order through scientific notions of sensation is central to contemporary theories of new materialism posthumanism aesthetics and affect theory

Grassland-Invertebrate Interactions: Plant Productivity, Resilience and Community Dynamics Ivan Hiltbold, Michael Rostás, 2017-10-13 Natural and anthropogenic grasslands such as prairies meadows rangelands and pastures cover more than 40% of the planet s surface and provide a wealth of ecological services Grasslands alone store one third of the global carbon stocks and grass roots through their specific architectures ensure water cycling and prevent the

erosion of fertile topsoil In addition grasslands are of vital importance for human food production as vast areas of rangelands and pastures provide feed for livestock Pastoral legumes mobilize atmospheric nitrogen and improve fertility of arable soils Not least grasslands are an essential genetic resource The three major crop species that feed half of the global population have been bred from wild grasses Ancestors of our contemporary turf cultivars common components of urban landscapes and recreation spaces originated from wild grasslands Although natural and managed grasslands represent pivotal ecosystems many aspects of how they function are poorly understood To date most attention has focused on grassland primary producers i e forage plants and mammalian grazers but invertebrates are likely to play an equally if not more important role in grassland ecosystem functioning In Australian pastures for example the biomass of root feeding scarab beetles can often exceed that of sheep and plant damage caused by invertebrates is sometimes equivalent to an average dairy cow s grass consumption Indeed grasslands are one of the most densely populated ecosystems with invertebrates being probably the most important engineers that shape both plant communities and the grassland as a whole In a rapidly changing world with increasing anthropogenic pressure on grasslands this Research Topic focuses on 1 How grassland habitats shape invertebrate biodiversity 2 Impacts of climate change on grassland invertebrate interactions 3 Plant and invertebrate pest monitoring and management 4 Plant mediated multitrophic interactions and biological control in grasslands 5 Land use and grassland invertebrates 6 Plant resistance to invertebrate pests Given the increasing demand for food and land for human habitation unprecedented threats to grasslands are anticipated Resilient to some extent these key ecosystems need to be better comprehended to guarantee their sustainable management and ecosystem services
