Measuring Up Biology Lesson 5:

Does Measurement Measure Up? John M. Henshaw, 2006-05-05 A critical perspective of how measurements have come to affect our lives from reasonable doubt to No Child Left Behind There was once a time when we could not measure sound color blood pressure or even time We now find ourselves in the throes of a measurement revolution from the laboratory to the sports arena from the classroom to the courtroom from a strand of DNA to the far reaches of outer space Measurement controls our lives at work at school at home and even at play But does all this measurement really measure up Here John Henshaw examines the ways in which measurement makes sense or creates nonsense Henshaw tells the controversial story of intelligence measurement from Plato to Binet to the early days of the SAT to today's super quantified world of No Child Left Behind He clears away the fog on issues of measurement in the environment such as global warming hurricanes and tsunamis and in the world of computers from digital photos to MRI to the ballot systems used in Florida during the 2000 presidential election From cycling and car racing to baseball tennis and track and field he chronicles the ever growing role of measurement in sports raising important questions about performance and the folly of comparing today's athletes to yesterday's records We can't quite measure everything at least not yet What could be more difficult to quantify than reasonable doubt However even our justice system is yielding to the measurement revolution with new forensic technologies such as DNA fingerprinting As we evolve from unquantified ignorance to an imperfect but everpresent state of measured awareness Henshaw gives us a critical perspective from which we can measure up the measurements that have come to affect our lives so greatly

Eighteen Takes on God Leslie Stevenson, 2019-10-01 Who is God How should we think about the concept of God How have religions defined and altered conceptions of God over the ages Are modern conceptions of God so different from our ancestors Philosopher Leslie Stevenson here offers eighteen short and lively takes on God to help orient readers to this vast and confusing subject Surveying everything from the idea of God as an old man in the sky to the more abstract idea of a metaphysical God among other ways of imaging the divine Stevenson presents a clear and helpful guide for curious readers Stevenson expresses no overall pre commitment to theism atheism or agnosticism rather he offers a sympathetic account of a variety of views combined with critical questioning about their meaning and practical application
