LVCS VENTILATION CONTROL SYSTEM

INSTALLATION, OPERATION AND MAINTENANCE INSTRUCTIONS FOR HEALTHY CLIMATE® LVCS VENTILATION CONTROL SYSTEM FOR USE WITH FURNACES /AIR HANDLERS

Shipping & Packing List

Package 1 of 1 contains the following:

- 1 – Ventilation controller
(includes outdoor temperature sensor,
time only resistor and (4) mounting screws)
- 1 – Motorized damper (spring closed, power open)
- 1 – 24VAC transformer

Application

Healthy Climate LVCS Ventilation Control System provides fresh air intake which can be used with any furnace or air handler. Fresh air is brought into the return air system, where it can be filtered. The controller allows fresh air intake using a motorized damper when outdoor conditions are appropriate. In very cold climates, balanced ventilation is recommended. LVCS Ventilation Control System can be used with an exhaust fan to provide balanced ventilation. Per ASHRAE 62.2-2003, very cold climates are those that have more than 9000 annual heating degree-days based on 65°F day.

Outdoor Temperature and Indoor Humidity Control Limits

In a standard application, your Ventilation Controller uses measurements of Outdoor Temperature and Indoor Humidity, along with the user-adjustable timer settings, to determine when to ventilate. Outdoor Temperature is measured with a sensor placed at the

Operation Principles

Working in conjunction with a normally closed motorized damper, the Ventilation Controller makes decisions regarding when – and how long – to ventilate. It does this through continuous monitoring of indoor relative humidity, outdoor temperature, and user-adjusted timer settings. Ventilation time may be satisfied by a heating, cooling, or fan call initiated by the thermostat, or from a fan call initiated by the Ventilation Controller itself.

Indoor relative humidity is monitored to help prevent high humidity conditions inside your home. The Ventilation Controller will not allow ventilation when indoor relative humidity rises above 55% RH.

If the outdoor air temperature is below 0°F or above 100°F, the normally closed motorized damper to the outside will not be opened. This feature can be disabled at installation if the installer chooses not to use outdoor air temperature as a parameter.

inlet of the fresh air intake duct. Indoor Humidity is measured in the return duct with a sensor built into the Controller. In conjunction with the timer settings, the Controller then operates according to the temperature and humidity control limits shown in Figure 1.
