*Effectiveness of teachers' guides in the Global South* Benjamin Piper, Yasmin Sitabkhan, Jessica Mejia, Kellie Betts, 2018-05-10 This report presents the results of RTI International Education's study on teachers' guides across 13 countries and 19 projects. Using quantitative and qualitative methods, we examine how teachers' guides across the projects differ and find substantial variation in the design and structure of the documents. We develop a scripting index so that the scripting levels of the guides can be compared across projects. The impact results of the programs that use teachers' guides show significant impacts on learning outcomes associated with approximately an additional half year of learning, showing that structured teachers' guides contribute to improved learning outcomes. During observations, we find that teachers make a variety of changes in their classroom instruction from how the guides are written, showing that the utilization of structured teachers' guides does not create robotic teachers unable to use their own professional skills to teach children. Unfortunately, many changes that teachers make reduce the amount of group work and interactivity that was described in the guides, suggesting that programs should encourage teachers to more heavily utilize the instructional routines designed in the guide. The report includes a set of research-based guidelines that material developers can use to develop teachers' guides that will support effective instructional practices and help improve learning outcomes. The key takeaway from the report is that structured teachers' guides improve learning outcomes, but that overly scripted teachers' guides are somewhat less effective than simplified teachers' guides that give specific guidance to the teacher but are not written word for word for each lesson in the guide.

 Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st  
 century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also  
 for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as  
 well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities  
 Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our  
 numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed  
 abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical  
 capabilities In recent years numerical development has gained increasing research interest documented in a growing number  
 of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally  
 our understanding of how numerical competencies develop has also benefitted considerably from the advent of different  
 neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now  
 starting to put together a more and more coherent picture of how numerical competencies develop and how this development  
 is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons  
 for atypical numerical development which often has grievous consequences for those who suffer from developmental  
 dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical  
 development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal  
 evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental  
 methodologies but also theoretical contributions review articles or opinion papers      **Handbook of Response to**
