Signal Processing Applications Using

Multidimensional Polynomial Splines Dhananjay Singh, Madhusudan Singh, Zaynidinov Hakimjon, 2018-12-07 This book highlights new methods algorithms and software for the digital processing and recovery of signals. In addition it describes a new method for modeling one dimensional and multidimensional signals as successions of local polynomial splines and their spectral characteristics. It provides examples of how the proposed methods can be applied in specific cases together with signal processing software examples in the MATLAB environment and models of special processes in the Simulink environment. The book's goal is to make it easier for beginners to understand the subject matter it is intended for engineers undergraduate and graduate students engaged in research or the evaluation and design of hardware and software for the digital processing and recovery of signals

Iterative Methods for Solving Nonlinear Equations and Systems Juan R. Torregrosa, Alicia Cordero, Fazlollah Soleymani, 2019-12-06 Solving nonlinear equations in Banach spaces real or complex nonlinear equations nonlinear systems and nonlinear matrix equations among others is a non-trivial task that involves many areas of science and technology Usually the solution is not directly affordable and requires an approach using iterative algorithms This Special Issue focuses mainly on the design analysis of convergence and stability of new schemes for solving nonlinear problems and their application to practical problems Included papers study the following topics Methods for finding simple or multiple roots either with or without derivatives iterative methods for approximating different generalized inverses real or complex dynamics associated to the rational functions resulting from the application of an iterative method on a polynomial Additionally the analysis of the convergence has been carried out by means of different sufficient conditions assuring the
