Measurements And Their Uncertainty:

Measurements and their Uncertainties Ifan Hughes, Thomas Hase, 2010-07-02 This hands on guide is primarily intended to be used in undergraduate laboratories in the physical sciences and engineering It assumes no prior knowledge of statistics It introduces the necessary concepts where needed with key points illustrated with worked examples and graphic illustrations In contrast to traditional mathematical treatments it uses a combination of spreadsheet and calculus based approaches suitable as a quick and easy on the spot reference The emphasis throughout is on practical strategies to be adopted in the laboratory Error analysis is introduced at a level accessible to school leavers and carried through to research level Error calculation and propagation is presented through a series of rules of thumb look up tables and approaches amenable to computer analysis The general approach uses the chi square statistic extensively Particular attention is given to hypothesis testing and extraction of parameters and their uncertainties by fitting mathematical models to experimental data Routines implemented by most contemporary data analysis packages are analysed and explained The book finishes with a discussion of advanced fitting strategies and an introduction to Bayesian analysis

Quality and Reliability in Analytical Chemistry George E. Baiulescu, Raluca-Ioana Stefan, Hassan Y. Aboul-Enein, 2000-09-28 Quality and reliability are central to success in every discipline but perhaps nowhere are they more important or more interconnected than in the practice of analytical chemistry Here although reliable analytical information implies quality not all quality information proves reliable *Quality and Reliability in Analytical Chemistry* examines the various factors affecting these parameters in each step of the analytical process The Sample Investigate the reliability of the sample including its history and homogeneity The Method See the connection between reliability and the selection of analytical methods for environmental food and clinical analyses The Instruments Examine the relationship between reliability and your instrumentation Data Processing Consider the importance of chemometrics in the reliability of data processing Automation Explore automation of the analytic process through discussion of its parameters rapidity reproducibility flexibility and reliability Standards and Standardization Understand how quality and reliability cannot be assured without using standards for measurement and how only reliable methods can be standardized The goal of the analytic process is to obtain high quality information with high reliability *Quality and Reliability in Analytical Chemistry* helps you meet that goal and thereby satisfy your quality assurance and quality control requirements

Acid Deposition and Ecosystem Sensitivity in East Asia Vladimir Nikolaevich Bashkin, Soon-Ung Park, 1998 The rapid growth of industrialisation and urbanisation and a significant increase in agricultural production in East Asia have caused a remarkable increase in SO₂ and NO_x emissions during past several decades The consequences of these growing emissions have been closely connected with enforced acidification loading in ecosystems and that results in actual and potential risk on many sensitive ecosystems Until now only some preliminary attempts have been made to calculate the acidification loading in Asia Thus the main goal of this international project is to gather the existing information on the acid deposition and

ecosystem sensitivity in East Asia from the national research teams This volume will provide useful information in developing more profound insight into the complexity of air pollution and its interaction with ecosystems in East Asia
