### Functional Description / Operation of Modules (Draft)

#### Functions of the GTR 8000 Base Radio Modules

The following lists GTR 8000 Base Radio modules:

- Transceiver (XCVR) module (with or without transceiver option card)
- Power amplifier module (not applicable in a GPW 8000 Receiver)
- Fan module
- Power supply module

#### Transceiver Module Overview

The transceiver module provides the control, exciter, receiver, and optional transceiver option card for the base radio/receiver.

Transceiver Module (Front View)

The transceiver generates the station reference, which typically needs to be locked on to one of many possible external sources. The external source can be either the site controller TDM clocks or the external reference operating at 5 or 10 MHz. An internal frequency reference operating at 10 MHz is available in an optional transceiver option card.

The transceiver SPI bus allows communication with its receiver and exciter circuitry, as well as the power supply and power amplifier modules.

There are two or three circuit boards in the transceiver:

- **Transceiver Control Board:** Performs the control management, digital signal processing, and transmit and receive data formatting for the base radio.
- **Transceiver RF Board:** Contains DC power conversion/regulation and performs receiver and exciter functions.
- **Transceiver Option Card:** An optional board that attaches to the control board. Provides an internal 10 MHz frequency reference. For conventional base radio/receiver operation it also provides the analog interfaces and wildcard I/Os. The transceiver option card requires an internal frequency reference oscillator alignment at different intervals that is mandated by its category and frequency band. See Base Radio Service Help > Service Screens > Alignment Screens in the *CSS Online Help* for the alignment procedures and mandated intervals. The transceiver option card is available in two categories:
  - **OCXO (Oven Controlled Crystal Oscillator)** – operates at 0.1 ppm which is inclusive to temperature and aging. The OCXO Transceiver Option Card is available in 700/800 MHz, UHF R1/R2, and VHF frequency bands.
  - **TCXO (Temperature Compensated Crystal Oscillator)** – operates at 1.5 ppm, of which 0.5 ppm is allocated to temperature and 1.0 ppm is allocated to aging. Reference precision with the TCXO is traded for lower power consumption. The TCXO mandates shorter maintenance intervals. The TCXO transceiver option card is available in UHF R1/R2 frequency bands. The TCXO is only available for non-simulcast conventional systems.

#### Transceiver Control Board

The main operating software for the base radio is loaded in the transceiver (XCVR) control section. As the main manager for the base radio, the XCVR control board provides operational control over the other station modules. It handles three types of information flow, in the following ways:

- Serves as a gateway between the network and RF functionality, by distributing the RF payload to and from the network.
- Supports operational and diagnostic functions with digital control data (for example: site information, channel assignments, and identification numbers for call processing).
- Ensures the flow of other network management configuration information.
