,1999 Conductor: Distributed Adaptation for Heterogeneous Networks Mark D. Yarvis, Peter Reiher, Gerald J. Popek, 2002-05-31 Internet heterogeneity is driving a new challenge in application development adaptive software Together with the increased Internet capacity and new access technologies network congestion and the use of older technologies wireless access and peer to peer networking are increasing the heterogeneity of the Internet Applications should provide gracefully degraded levels of service when network conditions are poor and enhanced services when network conditions exceed expectations Existing adaptive technologies which are primarily end to end or proxy based and often focus on a single deficient link can perform poorly in heterogeneous networks Instead heterogeneous networks frequently require multiple coordinated and distributed remedial actions Conductor Distributed Adaptation for Heterogeneous Networks describes a new approach to graceful degradation in the face of network heterogeneity distributed adaptation in which adaptive code is deployed at multiple points within a network The feasibility of this approach is demonstrated by conductor a middleware framework that enables distributed adaptation of connection oriented application level protocols By adapting protocols conductor provides application transparent adaptation supporting both existing applications and applications designed with adaptation in mind Conductor Distributed Adaptation for Heterogeneous Networks introduces new techniques that enable distributed adaptation making it automatic reliable and secure In particular we introduce the notion of semantic segmentation which maintains exactly once delivery of the semantic elements of a data stream while allowing the stream to be arbitrarily adapted in transit We also introduce a secure architecture for automatic adaptor selection protecting user data from unauthorized adaptation These techniques are described both in the context of conductor and in the broader context of distributed systems Finally this book presents empirical evidence from several case studies indicating that distributed adaptation can allow applications to degrade gracefully in heterogeneous networks providing a higher quality of service to users than other adaptive techniques Further experimental results indicate that the proposed techniques can be employed without excessive cost Thus distributed adaptation is both practical and beneficial Conductor Distributed Adaptation for
