Luenberger Chapter 2 Problem:

H-infinity Control and Estimation of State-multiplicative Linear Systems Eli Gershon, Uri Shaked, Isaac Yaesh, 2005-06-24
Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector. Such systems are relevant for example in radar measurements where larger ranges involve higher noise level. This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory, linear matrix inequalities and Lyapunov parameter dependent functions. Topics covered include convex H_2 and H_∞ norms analysis of systems with multiplicative noise, state feedback control and state estimation of systems with multiplicative noise, dynamic and static output feedback of stochastic bilinear systems, tracking controllers for stochastic bilinear systems utilizing preview information. Various examples which demonstrate the applicability of the theory to practical control engineering problems are considered. Two such examples are taken from the aerospace and guidance control areas.

Smooth Nonlinear Optimization in $\mathbb{R}^n$ Tamás Rapcsák, 2013-12-01
Experience gained during a ten year long involvement in modelling, programming and application in nonlinear optimization helped me to arrive at the conclusion that in the interest of having successful applications and efficient software production, knowing the structure of the problem to be solved is indispensable. This is the reason why I have chosen the field in question as the sphere of my research. Since in applications mainly from among the nonconvex optimization models the differentiable ones proved to be the most efficient in modelling, especially in solving them with computers, I started to deal with the structure of smooth optimization problems. The book, which is a result of more than a decade of research, can be equally useful for researchers and students showing interest in the domain, since the elementary notions necessary for understanding the book constitute a part of the university curriculum. I intended dealing with the key questions of optimization theory which endeavour obviously cannot bear all the marks of completeness. What I consider the most crucial point is the uniform differential geometric treatment of various questions which provides the reader with opportunities for learning the structure in the wide range within optimization problems. I am grateful to my family for affording me tranquil productive circumstances. I express my gratitude to F.
