Kennedy, 2020-07-28 The book explores the state of social studies education within selected East Asian societies and provides some insights into distinctive classroom practices In an increasingly volatile and unpredictable world the education of young people who both understand the contexts in which they are growing up and see the need for engaging with them is a top priority This task falls to social studies education which carries the responsibility for inducting young people into their social world and helping them to see the role they can play within it This is particularly important in East Asia where strong economic growth long held cultural values and diverse political systems create an environment that challenges young people on multiple fronts This book with its team of regional authors shows how different societies in the region are dealing with these challenges and what can be expected from future citizens The book will appeal to policy makers researchers and teachers interested in the current state of social studies education in East Asian societies *Christopher Nolan* Darren Mooney, 2018-10-10 Christopher Nolan is one of the defining directors of the 21st century Few of his contemporaries can compete in terms of critical and commercial success let alone cultural impact His films have a rare ability to transcend audience expectations appealing to both casual moviegoers and dyed in the wool cineastes Nolan s work ranges from gritty crime thrillers Memento Insomnia to spectacular blockbusters the Dark Knight trilogy Inception They have taken audiences from the depths of space Interstellar to the harsh realities of war Dunkirk And they have pushed the boundaries of the possible in modern movie making This critical history covers his complete filmography tracing his career from film student to indie darling to Oscar nominated auteur Neuroinflammation and Behaviour Luba Sominsky, Adam K. Walker, Deborah M. Hodgson, 2015-07-21 The brain and immune system are involved in an intricate network of bidirectional communication This relationship is vital for optimal physiological and psychological development and functioning but can also result in unwanted

outcomes In particular this interaction plays an important role in cognition mood and behaviour Neuroinflammation is known to contribute to neurological and affective disorders including impaired learning and memory depressive anxiety and schizoaffective symptoms as well as pain The development of these conditions often occurs on the backdrop of pre existing physical illnesses which give rise to increased activation of the immune system such as cancer obesity infection and autoimmune disorders Similarly psychological states can alter regulation of the immune system This has been most extensively studied in the context of stress and immune function Understanding the underlying mechanisms that lead to the onset of inflammation induced neuropathology and stress induced immune suppression will contribute to the development of novel and effective treatment strategies for both the disease and its neurological side effects In this research topic we explored the relationship between the immune system and the brain throughout life We include both original research and review papers from animal clinical and molecular perspectives

Understanding Developmental Dyslexia: Linking Perceptual and Cognitive Deficits to Reading Processes Pierluigi Zoccolotti, Peter F. de Jong, Donatella Spinelli, 2016-06-24 Understanding the mechanisms responsible for developmental dyslexia DD is a key challenge for researchers A large literature mostly concerned with learning to read in opaque orthographies emphasizes phonological interpretations of the disturbance Other approaches focused on the visual perceptual aspects of orthographic coding Recently this perspective was supported by imaging data showing that individuals with DD have hypo activation in occipito temporal areas a finding common to both transparent and opaque orthographies Nevertheless it is difficult to infer causal relationships from activation data Accommodating these findings within the cognitive architecture of reading processes is still an open issue This is a general problem which is present in much of the literature For example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without DD failed to provide explicit links with the reading process Thus several areas of investigation e.g. acoustic deficits or magnocellular deficiencies have been plagued by replication failures Furthermore much research has neglected the possible contribution of comorbid symptoms By contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic comorbidities that make causal interpretations problematic This has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of DD Recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance Another critical issue in DD is that much of the research has been conducted in English speaking individuals However English is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on English to other more regular orthographies By contrast important information can be gotten from systematic comparisons across languages Thus the distinction between regular and irregular orthographies is another potentially fruitful area of investigation Overall in spite of much research current interpretations seem unable to integrate all available findings Some proposals focus on the cognitive

description of the reading profile and explicitly ignore the distal causes of the disturbance Others propose visual acoustic or phonological mechanisms but fail to link them to the pattern of reading impairment present in different children The present Research Topic brings together studies based on different methodological approaches i e behavioural studies examining cognitive and psycholinguistic factors eye movement investigations biological markers neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies transparent and opaque to identify the mechanisms underlying DD The RT does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding developmental dyslexia
