

found that bacteria accumulated in blue and red light of the split spectrum. He thus discovered the effect of different wavelength of light on photosynthesis (action spectrum).

- **Cornelius Van Neil** (1897-1985) on the basis of studies with purple and green sulphur bacteria showed that photosynthesis is a light dependent reaction in which hydrogen from an oxidisable compound reduces CO_2 to form sugar.

In green sulphur bacteria, when H_2S , instead of H_2O was used as hydrogen donor, no O_2 was evolved. He inferred that O_2 evolved by green plants comes from H_2O but not from CO_2 as thought earlier.

Where Does Photosynthesis Takes Place?

- Chloroplasts are **green plastids** which function as the site of photosynthesis in eukaryotic photoautotrophs. Inside the leaves, chloroplast is generally present in mesophyll cells along their walls.
- Within the chloroplast there is a membranous system consisting of grana, the stroma lamellae and the fluid stroma.

- The membrane system is responsible for synthesizing light energy for the synthesis of ATP and NADPH. In stroma enzymatic reactions incorporate CO_2 in plants leading to synthesis of sugar.
- The reaction in which light energy is absorbed by grana to synthesis ATP and NADPH is called **light reaction**. The later part of photosynthesis in which CO_2 is reduced to sugar, light is not necessary and is called **dark reaction**.

capture of light energy by living organisms is a simple enough concept but its investigation draws on the resources of
disciplines from all fields of science The aim of this text is to provide a clear stimulating and essentially affordable coverage
for undergraduate students of biology The activity of science is debate and practical experiment its product is a body of
propositions which at any given time reflects the judgment and prejudices of those taking part The value of a proposition is
related to the conceivable alternatives and writing it down without its context creates the false impression that science
progresses by compilation of an increasing list of absolute truths It does not the facts and figures presented in the following
pages have no intrinsic value unless they can be used by the reader to support an argument or point of view In short the
reader is urged to respond So what to every item Secondly ideas like other foods should be date stamped science is
inseparable from its history I have set out time charts to represent the evolution of our understanding in certain areas I have
assumed that the reader is pursuing a course with a content of biochemistry microbiology and plant science or has access to
basic texts I have assumed also that common methods such as spectrophotometry chromatography and electrophoresis as
well as the techniques of molecular biology will be either part of the same course or in active use nearby *Photosynthesis*
