

## LIFE SCIENCES - GRADE 12

### TOPIC: MIDYEAR EXAMINATION REVISION

- 1 Read the extract below.

#### **PLASTIC LINKED TO FEMALE INFERTILITY**

Several studies indicate that bisphenol A (BPA), a chemical used in the production of many household plastic products, may be linked to female infertility (inability to get pregnant naturally and to deliver a healthy baby). BPA can be ingested or absorbed through the skin when using plastic products.

BPA seems to interfere with the normal secretion of FSH by the pituitary gland and is linked to abnormal menstrual cycles and reduced implantation rates. These studies also show a link between high BPA levels and a decrease in the development and maturation of ovarian follicles.

- 1.1 State ONE function of FSH. (1)
- 1.2 Name ONE other hormone in females that is secreted by the pituitary gland during menstrual cycle. (1)
- 1.3 Explain how an undersecretion of the hormone in QUESTION 1.2 may lead to infertility. (2)
- 1.4 Explain why a decrease in the maturation of ovarian follicles may lead to reduced implantation rates. (5)
- 2 The In humans, haemophilia is caused by a recessive allele on the X-chromosome ( $X^h$ ).  
A woman, who is heterozygous for haemophilia, marries a man with haemophilia.  
Use a genetic cross to show the percentage chance of the couple having a daughter who is homozygous for normal blood clotting. (9)
- 3 The diagram below shows the inheritance of Tay-Sachs, a rare disease which leads to the destruction of neurons. It is inherited as an autosomal disorder, controlled by two alleles, (T) and (t). (7)
