October 2019 Monthly Current Affairs with MCQs for Competitive Exams Disha Experts, 2019-09-25 **Multi-omic Data Integration** Paolo Tieri, Christine Nardini, Jennifer Elizabeth Dent, 2015-09-17 Stable predictive biomarkers and interpretable disease signatures are seen as a significant step towards personalized medicine. In this perspective, integration of multi-omic data coming from genomics, transcriptomics, glycomics, proteomics, metabolomics is a powerful strategy to reconstruct and analyse complex multi-dimensional interactions, enabling deeper mechanistic and medical insight. At the same time, there is a rising concern that much of such different omic data, although often publicly and freely available, lie in databases and repositories underutilised or not used at all. Issues coming from lack of standardisation and shared biological identities are also well known. From these considerations, a novel pressing request arises from the life sciences to design methodologies and approaches that allow for these data to be interpreted as a whole, i.e. as intertwined molecular signatures containing genes, proteins, mRNAs and miRNAs, able to capture inter-layer connections and complexity. Papers discuss data integration approaches and methods of several types and extents, their application in understanding the pathogenesis of specific diseases or in identifying candidate biomarkers to exploit the full benefit of multi-omic datasets and their intrinsic information content. Topics of interest include but are not limited to: Methods for the integration of layered data, including but not limited to genomics, transcriptomics, glycomics, proteomics, metabolomics; Application of multi-omic data integration approaches for diagnostic biomarker discovery in any field of the life sciences; Innovative approaches for the analysis and the visualization of multi-omic datasets; Methods and applications for systematic measurements from single undivided samples comprising genomic, transcriptomic, proteomic, metabolomic measurements among others; Multi-scale approaches for integrated dynamic modelling and simulation; Implementation of applications, computational resources and repositories devoted to data integration, including but not limited to data warehousing, database federation, semantic integration service oriented and/or wiki integration. Issues related to the definition and implementation of standards, shared identities and semantics with particular focus on the integration problem. Research papers, reviews and short communications on all topics related to the above issues were welcomed.

Critical Role of Animal Science Research in Food Security and Sustainability National Research Council, Division on Earth and Life Sciences, Board on

Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31 By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion. With globalization and expected growth in global affluence, a substantial increase in per capita meat, dairy and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security.

Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development, technology and resource needs for research in the field of animal agriculture both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security, evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems, and identifies factors that may impact the ability of the United States to meet demand for animal products, including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies and new ways of approaching agriculture if the food, feed and fiber needs of the global population are to be met. The recommendations of **Critical Role of Animal Science Research in Food Security and Sustainability** will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century.

The Fuzzy and the Techie Scott Hartley, 2017-04-25 Artfully explains why it is time for us to get over the false division between the human and the technical. Tim Brown, CEO of IDEO and author of *Change by Design*, Scott Hartley first heard the terms fuzzy and techie while studying political science at Stanford University. If you majored in humanities or social sciences you were a fuzzy. If you majored in computer or hard sciences you were a techie. While Silicon Valley is generally considered a techie stronghold, the founders of companies like Airbnb, Pinterest, Slack, LinkedIn, PayPal, Stitch Fix, Reddit and others are all fuzzies. In other words, people with backgrounds in the liberal arts. In this brilliantly counterintuitive book, Hartley shatters assumptions about business and education today. Learning to code is not enough. The soft skills: curiosity, communication and collaboration, along with an understanding of psychology and society's gravest problems, are central to why technology has value. Fuzzies are the instrumental stewards of robots, artificial intelligence and machine learning. They offer a human touch that is of equal if not greater importance in our technology-led world than what most techies can provide. For anyone doubting whether a well-rounded liberal arts education is practical in today's world, Hartley's work will come as an inspiring revelation. Finalist for the 2016 Financial Times McKinsey Bracken Bower Prize and A Financial Times Business Book of the Month. **AIIMS Annual**
