Understanding Developmental Dyslexia: Linking Perceptual and Cognitive Deficits to Reading Processes Pierluigi Zoccolotti, Peter F. de Jong, Donatella Spinelli, 2016-06-24 Understanding the mechanisms responsible for developmental dyslexia (DD) is a key challenge for researchers A large literature mostly concerned with learning to read in opaque orthographies emphasizes phonological interpretations of the disturbance Other approaches focused on the visual perceptual aspects of orthographic coding Recently this perspective was supported by imaging data showing that individuals with DD have hypo activation in occipito temporal areas a finding common to both transparent and opaque orthographies Nevertheless it is difficult to infer causal relationships from activation data Accommodating these findings within the cognitive architecture of reading processes is still an open issue This is a general problem which is present in much of the literature For example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without DD failed to provide explicit links with the reading process Thus several areas of investigation e.g acoustic deficits or magnocellular deficiencies have been plagued by replication failures Furthermore much research has neglected the possible contribution of comorbid symptoms By contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic comorbidities that make causal interpretations problematic This has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of DD Recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance Another critical

issue in DD is that much of the research has been conducted in English speaking individuals. However, English is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on English to other more regular orthographies. By contrast, important information can be gotten from systematic comparisons across languages. Thus, the distinction between regular and irregular orthographies is another potentially fruitful area of investigation. Overall, in spite of much research, current interpretations seem unable to integrate all available findings. Some proposals focus on the cognitive description of the reading profile and explicitly ignore the distal causes of the disturbance. Others propose visual acoustic or phonological mechanisms but fail to link them to the pattern of reading impairment present in different children. The present Research Topic brings together studies based on different methodological approaches: i.e. behavioural studies examining cognitive and psycholinguistic factors, eye movement investigations, biological markers, neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies, transparent and opaque, to identify the mechanisms underlying DD. The RT does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding of developmental dyslexia.

The Changing Faces of Glutathione, a Cellular Protagonist
Alfonso Pompella, Alessandro Corti, 2015-07-17

Glutathione (GSH) has been described for a long time just as a defensive reagent against the action of toxic xenobiotics, drugs, pollutants, carcinogens, both directly and as a cofactor for GSH transferases. As a prototype antioxidant, it has been involved in cell protection from the noxious effect of excess oxidant stress, both directly and as a cofactor of glutathione peroxidases. In addition, it has long been known that GSH is capable of forming disulfide bonds with cysteine residues of proteins and the relevance of this mechanism, S-glutathionylation, in regulation of protein function has been well documented in a number of research fields. Rather paradoxically, it has also been highlighted that GSH and notably its catabolites, as originated by metabolism by gamma-glutamyltransferase, can promote oxidative processes by participating in metal ion mediated reactions, eventually leading to formation of reactive oxygen species and free radicals. Also, a fundamental role of GSH has been recognized in the storage and transport of nitric oxide (NO) in the form of S-nitrosoglutathione (GSNO). The significance of GSH as a major factor in regulation of cell life, proliferation and death can be regarded as the integrated result of all these roles, as well as of more which are emerging in diverse fields of biology and pathophysiology. Against this background, modulation of GSH levels and GSH related enzyme activities represents a fertile field for experimental pharmacology in numerous and diverse perspectives of animal, plant and microbiologic research. This research topic includes 14 articles: i.e. 4 Opinion Articles, 6 Reviews and 4 Original Research Articles. The contributions by several distinguished research groups, each from his own standpoint of competence and expertise, provide a comprehensive and updated view over the diverse roles, the changing faces of GSH and GSH related enzymes in cell's health, disease and death.

Malaysian Media Studies: Integrating Perspectives (UM Press) Azizah Hamzah, Amira Firdaus, 2016. This

edited volume revisits developments in the field of media education and media studies at a time when society is experiencing a ubiquitous networked digital media environment. Rapid advances in media and communication technologies and the accompanying developments in social, cultural, political, and economic realms pose unexpected challenges to the curricula of long-established media and communication schools. As opposed to rigidly structured nation-based mass media systems of the past century, the new global media sphere celebrates the breaking down of borders, whether spatial, cultural, or social. Today, in the second half of the second decade of the 21st century, this problem translates into what and how to teach students of media who, in all likelihood, are more adept media consumers and producers than their teachers. In a region where educational institutions and educators don't transform as fast as media technologies do, there is a need to problematize and to reflect upon the situation. This edited volume examines critical issues related to media studies at local institutions of higher learning and includes a sampling of research charting new directions in local media scholarship. Contributions to this edited volume reflect the shared concerns of media educators and researchers in Malaysia and two neighboring countries, Indonesia and Thailand. Three main themes underscore this volume, reflecting their importance to the evolution of media education and to a certain extent, research as well: Historical development of media education and training; Current developments and future trajectories of media education in a globalized digital media environment; Analysis of media and society.

Social Studies Education in East Asian Contexts Kerry J. Kennedy, 2020-07-28. The book explores the state of social studies education within selected East Asian societies and provides some insights into distinctive classroom practices. In an increasingly volatile and unpredictable world, the education of young people who both understand the contexts in which they

are growing up and see the need for engaging with them is a top priority This task falls to social studies education which carries the responsibility for inducting young people into their social world and helping them to see the role they can play within it This is particularly important in East Asia where strong economic growth long held cultural values and diverse political systems create an environment that challenges young people on multiple fronts This book with its team of regional authors shows how different societies in the region are dealing with these challenges and what can be expected from future citizens The book will appeal to policy makers researchers and teachers interested in the current state of social studies education in East Asian societies
