Life Science Paper 2 September 2013 Memorandum

**Julius Bryant, Rowan Watson, Elizabeth
James**

Life Science Paper 2 September 2013 Memorandum:

Critical Role of Animal Science Research in Food Security and Sustainability National Research Council, Division on Earth and Life Sciences, Board on Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31 By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion. With globalization and expected growth in global affluence, a substantial increase in per capita meat, dairy, and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security. **Critical Role of Animal Science Research in Food Security and Sustainability** identifies areas of research and development, technology, and resource needs for research in the field of animal agriculture both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security, evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems, and identifies factors that may impact the ability of the United States to meet demand for animal products, including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information, and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies, and new ways of approaching agriculture if the food, feed, and fiber needs of the global population are to be met. The recommendations of **Critical Role of Animal Science Research in Food Security and Sustainability** will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century.

Data Management Margaret E. Henderson, 2016-10-25 Libraries organize information and data is information so it is natural that librarians should help people who need to find, organize, use, or store data. Organizations need evidence for decision making; data provides that evidence. Inventors and creators build upon data collected by others. All around us, people need data. Librarians can help increase the relevance of their library to the research and education mission of their institution by learning more about data and how to manage it. **Data Management** will guide readers through understanding data management basics and best practices. Using the reference interview to help with data management. Writing data management plans for grants. Starting and growing a data management service. Finding collaborators inside and outside the library. Collecting and using data in different disciplines.

Research, Quality, Competitiveness Attilio Stajano, 2008-09-22 The European Union (EU) was launched as a response to the economic dominance of the United States and to a lesser degree the Soviet Union. The nations of Western Europe were too small to

compete against large scale and diversified economies on their own Six countries eventually expanding to 27 and counting took a series of steps toward progressively deeper integration the removal of internal tariffs the construction of a common external tariff the elimination of many but not all non tariff barriers leading to a single market and the adoption of a common currency by 15 of the member states The EU today equals and even exceeds the U S on many key indicators of performance In the process two similar but nonetheless divergent models of social and economic life stand in contrast with each other The U S is more committed to capitalism and does little to dilute its harsh edges while the nations of Europe support wider social safety nets and more active regulation of commercial activity to mute the cruel aspects of the free market Until recently the economic dynamism of the U S called into question whether the so called European social model was sustainable in an era of globalization The EU was slipping in competitiveness and was being challenged by new global powerhouses like China and India Although the U S economy has slowed there is little indication that European countries are capable of leveraging the situation to their advantage

Principles of Clinical Medicine for Space Flight Michael R. Barratt, Ellen S. Baker, Sam L.
