Husain, 2022-08-01 **HAVE WE VALUED OUR CITIES ENOUGH?** Values bind us together which makes our communities stronger and united. Communities are built upon our tolerance and understanding of the value of our ties and ties pave our cities towards a bright future. The structure of this book is constructed around the concept of value. It contains a collection of readings about the challenges we face in cities, culture and heritage. The book is divided into three parts. The first part focuses on aesthetical values, the second contains articles on cultural values in cities and the third part is a specialized theme on water values and urban areas. Collectively the 12 chapters discuss findings, approaches, methodologies and provide new ways of understanding values in old and new cities. This collection of essays and contributors is concerned with underlying issues such as architectural values, heritage and the city, urban identity, conservation and preservation, water values and climate issues. Each part contains several chapters to enable cross reference and comparison. This book is a useful collection of academic resource which discusses some questions and issues that cities have to face. **Handbook of Family Theories** Mark A. Fine, Frank D. Fincham, 2013-03-05 Organized by content areas rather than by theory, this comprehensive accessible

handbook helps readers gain greater insight into how key theories have impacted today's family research. Most competing books organized by theory do not provide a strong sense of the links between theory and research. Using the 2000 and 2010 decade in review issues of the Journal of Marriage and Family as a resource, the book addresses the most important topics impacting family studies research today. The introductory chapter written by the editors provides an overview of the role family theories have had on the field. This chapter is followed by 23 others on family-related content areas written by renowned scholars in the field. The book is organized around the most important domains in the field: parenting and parent-child relationships, romantic relationships, conflict and aggression, structural variation and transitions, demographic variations, and families and extra-familial institutions. Each of the contributors describes how theory has been used to generate new knowledge in the field and suggests future directions for how theory may be used to extend our knowledge base. The book helps readers acquire a working knowledge of the key family science theories, findings, and issues and understand how researchers make use of these theories in their empirical efforts. To maximize accessibility, each of the renowned contributors addresses a common set of issues in their chapter: Introduction to the content area, Review of the key topics, issues, and findings, A description of each of the major theories used to study that particular content area, Limitations of the theories, Suggestions for better use of the theories and/or new theoretical advances, Conclusions about future theoretical developments. An ideal text for graduate and/or advanced undergraduate family theories courses, this book's unique organization also lends itself to use in content-based family studies science courses taught in family studies, human development, psychology, sociology, communication, education, and nursing. Due to its comprehensive and current approach, the book also appeals to scholars and researchers in these areas.

**The Case for Pandora** James Essig, Steve

McCarter, 2016-12-19 This book is about building craft for space travel: space travel that is not in the distant future but in the immediate future. There is no question that we have the technology to build and power large craft capable of traversing the galaxy, and for now this book will focus on achieving the goal of intragalactic travel. We will describe various methods of power generation and propulsion, delineate the materials and technology for construction, discuss the building of the spacecraft from the outside in, and show what is required to sustain life on the craft for extended periods of time. While we will go into some detail on each of these, pointing out advantages and disadvantages to components and methods, this is not nor is it intended to be a highly technical book to be used by specialists. Rather, it is intended to inform the general readership about what is possible and perhaps what is not in building and operating spacecraft for long distance and long duration travel with current and available means.
