Chemistry and Industry, 2009 **Data on Federal Research and Development Investments** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Modernizing the Infrastructure of the National Science Foundation Federal Funds Survey, 2010-01-27 Two surveys of the National Science

Foundation's Division of Science Resources Statistics SRS provide some of the most significant data available to understand research and development spending and policy in the United States. These are the Survey of Federal Funds for Research and Development and the Survey of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions. These surveys help reach conclusions about fundamental policy questions such as whether a given field of research is adequately funded, whether funding is balanced among fields, and whether deficiencies in funding may be contributing to a loss of U.S. scientific or economic competitiveness. However, the survey data are of insufficient quality and timeliness to support many of the demands put on them. In addition, the surveys are increasingly difficult to conduct in times of constrained resources, and their technological, procedural, and conceptual infrastructure has not been modernized for procedure or content. Data on Federal Research and Development Investments reviews the uses and collection of data on federal funds and federal support for science and technology and recommends future directions for the program based on an assessment of these uses and the adequacy of the surveys. The book also considers the classification structure or taxonomy for the fields of science and engineering. *The Publishers Weekly*, 1903. Uses of Geothermal Energy in Food and Agriculture Minh Van Nguyen, Sigurjón Arason, Margeir Gissurarson, Páll Gunnar Pálsson, 2015. Agriculture and agro industry are important sectors in the economies of most developing countries where they provide the main source of livelihoods for the majority of the poor. The lack of a sustainable supply of affordable energy is a major constraint to the development of these sectors in developing countries. Traditionally, geothermal energy has been utilized mainly to generate electricity; however, it can be harnessed for other important uses in agriculture and agro industry. Developing countries endowed with this renewable energy source have ample potential to use it in advancing their agriculture and agro industry sectors. This book reviews the use of geothermal energy in agriculture and agro industry around the world. With a simple format and copious illustrations and models, the book is accessible to a wide range of interested readers, including those with no technical background. It shows that geothermal resources have the potential to provide long-term secure energy for the agriculture and food industry in both developed and developing countries. Constraints and challenges that should be addressed before this potential can be fully achieved are also discussed. Publisher's description. Earth Grab Diana Bronson, 2011-10-27. Exploiting the general public's growing concerns about the ecological and climate crisis, some corporations are proposing quick fixes that threaten to wreak havoc on our planet. This book exposes how a biomass economy based on using gene technologies to reprogram living organisms will devastate our ecosystems as well as the human populations of the southern hemisphere by accelerating the wave of land grabs already common in Africa, Asia, and Latin America. Well researched and groundbreaking, this analysis explores a number of interrelated topics vis-à-vis the uses of bio and nano technologies. Indian Science Abstracts, 2011-03.
