DNA Sequence Analysis and the Genetic Code

Introduction:

DNA sequence analysis involves the determination of the **primary structure** of the DNA molecule in a cell or individual. The structure is the **nucleotide sequence** or the **relative order of nucleotide pairs** in a stretch of DNA, a gene, a chromosome, or the genome. The nucleotide sequence is said to be the most basic property of the gene.

All DNA sequencing protocols involve a common procedure. A protocol will generate a series of single stranded DNA molecules, each molecule one base longer than the previous one. DNA molecules of the *same sequence* but differing in length by one base at the end can be separated by gel electrophoresis on acrylamide gels. Bands corresponding to molecules of increasing length form a "ladder" that can be followed for up to 300 molecules.

The Sanger Method of DNA Sequencing

In 1975, Frederick Sanger and his colleagues developed a method for determining the nucleotide sequence of a defined piece of DNA. The method came to be known as the **Sanger method** or **dideoxy chain termination procedure**. The main feature of this procedure is the use of **enzymatic reactions**.

The process is carried out in each of 4 tubes that contain the necessary materials for DNA synthesis. These materials are the following:

1. The **single-stranded DNA** (of unknown sequence) which will serve as the template;
2. The oligonucleotide **primer** that will start DNA synthesis;
3. The **DNA polymerase** that will catalyze the reactions;
4. The **dideoxyribonucleotides (ddNTP's)** – ddATP's, ddCTP's, ddTTP's, and ddGTP's that will be added to the growing nucleotide chain.

The basic idea in the Sanger method is that at this point, each tube will be added with a different **deoxyribonucleotide (ddNTP)**. For example, ddATP is placed in tube 1 so that chain termination will occur with A's, ddCTP in tube 2 so chain termination will occur with C's, ddGTP in tube 3 so that chain termination will occur with G's, AND ddTTP in tube 4 so chain termination will occur with T's.

The result is a series of fragments of different lengths in each tube. In tube 1, all the fragments end in A; in tube 2, all end in C; in tube 3, all end in T; and in tube 4, all end in G.

Laboratory Exercises in Zoology H. S. Luker, A. J. Luker, 2013-10-22 *Laboratory Exercises in Zoology* serves as a teaching aid for students studying for Advanced level Zoology or Biology. This book provides exercises concerned mainly with physiology and some dissection techniques. Organized into 12 parts, this book begins with an overview of diffusion of molecules or ions from a region of high concentration to a region of relatively low concentration. This text then discusses the breakdown of complex molecules which is achieved by a series of hydrolyses catalyzed by the digestive enzymes produced by the glandular cells of the digestive system. Other chapters consider the various stages involved in making permanent stained preparations. This book discusses as well the requirements for animals in the laboratory. The final chapter deals with the rate of growth of an organism. This book is a valuable resource for students studying zoology and biology. Teachers and biology laboratory technicians will also find this book extremely useful. 40 Inquiry Exercises for the College Biology Lab A. Daniel Johnson, 2009 Drawing from the author's own work as a lab developer, coordinator, and instructor, this one-of-a-kind text for college biology teachers uses the inquiry method in presenting 40 different lab exercises that make complicated biology subjects accessible to major and nonmajors alike. The volume offers a review of various aspects of inquiry, including teaching techniques, and covers 16 biology topics including DNA isolation and analysis, properties of enzymes, and metabolism and oxygen consumption. Student and teacher pages are provided for each of the 16 topics. Laboratory Manual for Clinical Anatomy and Physiology for Veterinary Technicians - E-Book Thomas P. Colville, Joanna M. Bassert, 2023-01-18 Learn to apply your A/P learning in the lab setting with the *Laboratory Manual for Clinical Anatomy and Physiology for Veterinary Technicians* 4th Edition. This practical laboratory resource features a variety of activities such as terminology exercises, illustration identification, and labelling case presentations, and more to help reinforce your understanding of veterinary anatomy and physiology. The laboratory manual also features vivid illustrations, lists of terms and structures to be identified, and step-by-step dissection guides to walk you through the dissection process. Clinically oriented learning exercises introduce you to the language of anatomy and physiology as you identify structures and learn concepts. Clear step-by-step dissection instructions for complex organs such as the heart familiarize you with the dissection process in a very visual, easy-to-understand format. Learning objectives, the clinical significance of the content, and lists of terms and structures to be identified appear at the beginning of each chapter. Review activities and study exercises are included in every chapter to reinforce important information. High-quality full-color illustrations provide a solid understanding of the details of anatomic structure. Laboratory Manual for Clinical Anatomy and Physiology for Veterinary Technicians Thomas P. Colville, Joanna M. Bassert, 2015-03-13 NEW Overview at a Glance sections outline the main proficiencies of each chapter and include a list of all exercises in the chapter. **Laboratory Exercises in Genetics** Louis Levine, Norman M.
