**Glycemic Diet Cookbook** Aaron Nelson Ph D, 2020-09-04 The low glycemic low GI diet is based on the concept of the glycemic index GI Studies have shown that the low GI diet may result in weight loss reduce blood sugar levels and lower the risk of heart disease and type 2 diabetes However the way it ranks foods has been criticized for being unreliable and failing to reflect foods overall healthiness The glycemic index GI of a food is a measure of how a specific food with carbohydrates causes blood sugar to rise It is given as a number compared to the effect on your blood sugar of eating either glucose a type of sugar or white bread When you eat a food or beverage containing carbohydrates your body breaks down the carbs into a type of sugar called glucose The glucose goes into your bloodstream and causes your blood glucose blood sugar levels to rise Compare to low glycemic foods high glycemic foods lead to a quicker and greater spike in blood sugar levels These spikes are considered unhealthy for a few reasons They raise your average blood glucose levels They place a higher demand for insulin on your body They lead to more dramatic dips in blood glucose after the spike potentially causing hunger carbohydrate cravings and weakness A low GI diet and meal plan can help you avoid the blood sugar roller coaster but the GI is not on the nutrition label of most foods Instead you will probably to look at a list of the GI of foods The following are several low glycemic foods The three GI ratings are Low 55 or fewer Medium 56-69 High 70 or more Foods with a low GI value are the preferred choice They are slowly digested and absorbed causing a slower and smaller rise in blood sugar levels On the other hand foods with a high GI value should be limited They are quickly digested and absorbed resulting in a rapid rise and fall of blood sugar levels You can use this database to find the GI value and glycemic load described below of common foods It is important to note that foods are only assigned a GI value if they contain carbs Hence foods without carbs won't be found on GI lists

well known weight loss program has The South Beach Diet and Nutrition Very healthy low glycemic diet based on the glycemic index GI which is designed to help people make food choices that will enable them to maintain a relatively stable blood glucose level. Making this easier for individuals to understand and follow so that you can jump directly to your favorite interest. However, I recommend reading the whole article for a more detailed understanding of the relationship between glycemic index and the concept of low glycemic food. It was created in the early 1980s by Dr. David Jenkins at the Department of Nutrition Science at the University of Toronto. It was originally designed as a way of helping to manage blood sugar levels but recently it has been used by those who want to live a healthier lifestyle. Basically, the GI is a measurement of the effect certain carbohydrate-containing foods have on your blood sugar. Standardizing the glycemic index and the diet that uses the nutritional information and the relationship between the food you eat and blood glucose level. The glycemic index is the tool used to identify low glycemic foods that will help you regulate your blood sugar without having all the extreme random fluctuations. It was created by measuring the changes in blood sugar that occurred after eating a standard amount of food and then ranking them based on the effect.
