Analysis of the mechanical response of impact loaded composite sandwich structures with focus on foam core shear failure Tim Berend Block, 2014 Sandwich structures are an economically and structurally efficient way of designing large integral composite parts In the aerospace industry pre impregnated face sheets and honeycomb core structures can be considered as industry standard while e.g. naval structures and wind turbine blades typically use vacuum infusion technology with polymer foam cores Application of the less costly infusion technology in the aeronautical industry requires a thorough understanding of the damage tolerance including low velocity impact as a frequent source of damaging events At low impact energies damage in composite foam core sandwich structures is limited to core crushing and local face sheet delaminations Higher impact energies may initiate the competing failure modes face sheet rupture and core shear failure depending on impact geometric and material parameters Face sheet rupture leads to severe

local damage with typically good visibility while core shear failure leads to cracks and rear face sheet debonding of the foam core with less visibility This work investigates the low velocity impact response of sandwich structures with carbon fiber reinforced plastic CFRP face sheets and a polymeric foam core using experiments at room temperature and at 55 Celsius An analytically derived failure mode map is presented as a simple tool for design guidelines while the explicit finite element method is applied for a more detailed description of the sandwich impact process Both models are used to analyze the impact response and describe relevant sensitivity parameters of sandwich structures *Proceedings of the 13th International Scientific Conference* Eugeniusz Rusiński, Damian Pietrusiak, 2017-03-27

These proceedings of the 13th International Conference on Computer Aided Engineering present selected papers from the event which was held in Polanica Zdrój Poland from June 22 to 25 2016 The contributions are organized according to thematic sections on the design and manufacture of machines and technical systems durability prediction repairs and retrofitting of power equipment strength and thermodynamic analyses for power equipment design and calculation of various types of load carrying structures numerical methods for dimensioning materials handling and long distance transport equipment The conference and its proceedings offer a major interdisciplinary forum for researchers and engineers to present the most innovative studies and advances in this dynamic field

*Innovations in Impact and Blast Protections* Yonghui Wang, Xudong Zhi, Ximei Zhai, Jiachuan Yan, Rong Zhang, 2022-08-23 This book develops several novel foam filled structures and steel concrete steel SCS sandwich structures which provides more alternatives for ensuring the safety of buildings and infrastructures under extreme loading like impact and blast In the first part of this book the aluminium foam and polyurethane foam filled structures have been developed for dissipating impact and blast energy Experimental and numerical studies have been conducted to obtain their behaviours under impact loading In addition analytical models have also been proposed to assess their energy absorption performances and facilitate the impact and blast design when using the proposed foam filled structures In the second part of this book SCS sandwich structures with novel shear connectors have been developed and their behaviours under impact and blast loading have been experimentally numerically and analytically studied Analytical models for predicting the impact and blast responses of SCS sandwich structures have also been developed In the third part of this book a new steel polyurethane foam steel concrete steel SPUFSCS panel i.e. the combination of foam material and SCS panel has been developed to achieve a higher impact resistant capacity Owing to the increasing impact and blast threats on buildings and infrastructures the studies presented in this book are of significant importance for providing several new solutions for impact and blast enhancement

*Compression of an array of similar crash test simulation results* Stefan Peter Müller, 2022-02-08 Big data thrives on extracting knowledge from a large number of data sets But how is an application possible when a single data set is several gigabytes in size The innovative data compression techniques from the field of machine learning and modeling using Bayesian networks which have been theoretically developed and practically implemented here can reduce these huge amounts of data to a manageable size By eliminating redundancies in location time and between simulation results data reductions to less than 1% of the original size are possible The developed method represents a promising approach whose use goes far beyond the application example of crash test simulations chosen here **Advanced Fibrous Composite**

Basic Tutorial LS-DYNA & LS-PrePost for Beginners Dr. Arief Nur Pratomo, 2023-09-23 This book emerged due to the lack of references in the community about basic things using finite element method software LS DYNA and LS PrePost Whereas lots of engineering cases that can be solved using this software The main highlight of this book is the cases that involve large deformations such as a crash box of vehicles or an impact of bullets These analyses can be applied in unlimited topic such as transportation aircraft defense and so on For example in defense application this simulations can be used to design bullet protection plate and also evaluate the anti ballistic performance without doing experiments that are usually very expensive and time consuming Therefore with this simulation we can carry out the design process more cheaply and faster This book contains detailed procedures for using LS DYNA and LS PrePost for cases of low speed collisions such as crash box impact up to high speed impact of a bullet Cases such as armor for combat vehicles to military standard buildings can use the method described in this book Other cases such as the bullet tip design can also be evaluated Thus the method in this book can also be adopted for other broader analyses
