Prospects for quinoa adaptation and utilization in Eastern and Southern Africa Maliro, M.F.A., Abang, M.M., Mukankusi, C., Lung'aho, M., Fenta, B., Wanderi, S., Kapa, R., Okiro, O.A., Koma, E., Mwaba, C., Isse, M.M. and Bazile, D., Food and Agriculture Organization of the United Nations, 2021-01-22 Quinoa *Chenopodium quinoa* Willd is an emerging crop in the world with great potential to contribute to Africa's food and nutritional security. The increased popularity of quinoa in the last few years is attributed to the impact of activities carried out within the framework of the International Year of Quinoa IYQ2013 which helped greatly to raise awareness on the crop's multiple nutritional benefits and its expanding cultivation globally. The Food and Agriculture Organization (FAO) which championed the IYQ2013 has worked with developing countries in Africa which are grappling with food and nutrition insecurity to introduce and promote cultivation of quinoa. Production and utilization of quinoa is expected to significantly reduce food and nutrition insecurity and help farming communities adapt to climate change. FAO implemented a Technical Cooperation on quinoa titled Technical Assistance for the Strengthening of the Food System of Quinoa TCP SFE 3406 implemented in 2014 to 2015. This project was designed to support the institutional capacities of seven countries including Djibouti, Ethiopia, Kenya, Somalia, South Sudan, Uganda, and Zambia in the production, evaluation, management, utilization, and marketing of Quinoa under diverse farming systems and agro-ecological zones. The project was implemented and led by the FAO Subregional office for Eastern Africa. SFE Quinoa evaluation trials that were conducted across multiple sites in the participating countries served as pilot adaptability studies for the crop. This technical paper presents key technological, institutional, and policy considerations for the successful introduction, adaptation, and utilization of quinoa in Africa.

Livestock Genomics and Community-based Breeding Strategies in

Low-and-Middle-Income Countries: Challenges, Opportunities and Future Perspectives Isidore Houaga, Maria Wurzinger, Ntanganedzeni Mapholi, 2024-07-17 Low and Middle Income Countries (LMICs) are home to diverse populations of livestock species adapted to various agro-ecological zones, production systems, and harsh environmental conditions. However, the livestock in LMICs have not been systematically improved, and current low levels of productivity do not meet the demand for livestock products by a growing population. Recent advances in next-generation sequencing and genotyping technologies have enabled the application of genomic selection in various livestock species in some western countries with great success. Despite the low adoption of genomic breeding in LMICs, livestock industry various studies and programs were initiated, and some are still ongoing. Furthermore, community-based breeding programs (CBBP) have been initiated in many LMICs with great benefits for smallholder livestock farmers. CBBPs are based on the active participation of farmers from inception through to implementation and consider their needs, views, decisions, breeding objectives, and available infrastructure. In Africa, for instance, small ruminants CBBPs have generated substantial genetic gains and socioeconomic benefits for rural poor farmers. However, the current challenges affecting the data recording and genetic evaluation of the CBBPs in LMICs are

yet to be fully reported Furthermore the CBBPs are yet to integrate genomic selection in their breeding strategies For sustainable livestock breeding in LMICs there is a need to assess the current status of livestock genomics and community based breeding strategies to identify the challenges and suggest mitigating strategies and future improvement strategy plans In this Research Topic we aim to collect findings from past and current livestock genomics and community based breeding programs the challenges the lessons learned the opportunities and future perspectives
