New Trends in Enzyme Catalysis and Biomimetic Chemical Reactions Gertz I. Likhtenshtein, 2007-05-08 This book is a view of enzyme catalysis by a physico chemist with long term experience in the investigation of structure and action mechanism of biological catalysts This book is not intended to provide an exhaustive survey of each topic but rather a discussion of their theoretical and experimental background and recent developments The literature of enzyme catalysis is so vast and many scientists have made important contribution in the area that it is impossible in the space allowed for this book to give a representative set of references The author has tried to use reviews and general principles of articles He apologizes to those he has not been able to include The monograph is intended for scientists working on enzyme catalysis and adjacent areas such as chemical modeling of biological processes homogeneous catalysis biomedical research and biotechnology The book can be use as a subsidiary manual for instructors graduate and undergraduate students of university biochemistry and chemistry departments Pages ix x
