

HOW TO READ A SAFETY DATA SHEET

OSHA Brief:

Standard 29 CFR 1910.1200 (Hazardous Chemicals) requires that the chemical manufacturer, distributor, or importer provide Safety Data Sheets (SDSs) for each hazardous chemical to downstream users to communicate information on these hazards. The information contained in the SDS is largely the same as the MSDS, except that the SDS is required to be provided in a consistent user-friendly, 16-section format. This tool provides guidance to help workers who handle hazardous chemicals to become familiar with the format and understand the contents of the SDSs. The SDS requires information on the physical, chemical, and safety hazards of the chemical, and environmental health hazards, protective measures, and safety procedures for handling, storing, and transporting the chemical. The information contained in the SDS is organized into 16 sections. Each section is numbered 1 through 16. OSHA requires that SDSs prepared provide specific minimum information as detailed in Appendix C of 29 CFR 1910.1200. The SDSs prepared may also include additional information. Sections 1 through 8 contain general information about the chemical, identification, hazards, composition, safe handling practices, and emergency control measures (e.g., first aid). This information should be helpful to those that need to get the information quickly. Sections 9 through 11, and 14, contain other technical and scientific information such as physical and chemical properties, stability and reactivity information, toxicology, and environmental data. Sections 12 through 15 contain information about the date of preparation of the SDS. The SDS must also state that no applicable information was found when the preparer does not find relevant information for any chemical. The SDS must also contain Sections 12 through 15, to be consistent with the U.S. Globally Harmonized System of Classification and Labeling of Chemicals (GHS), but OSHA will not enforce the content of these sections because they contain information handled by other agencies. A description of all 16 sections of the SDS, along with their contents, is presented below.

Section 1: Identification

This section identifies the chemical on the SDS as well as the recommended use. It also provides the recommended information on the supplier. The recommended information consists of:

- Product identifier used on the label and any other names or synonyms by which the substance is known.
- Name, address, phone number of the manufacturer, distributor, or other responsible party, and emergency phone number.
- Recommended use of the chemical (e.g., a first aid kit, a cleaning agent, or a paint thinner).
- Any restrictions on use (e.g., labeling restrictions).

Section 2: Hazard(s) Identification
This section contains the hazards of the chemical on the SDS and the appropriate warning information associated with these hazards. The required information consists of:

- The hazard classification of the chemical (e.g., flammable liquid, category 2).
- Signal word.
- Hazard statement(s).
- Pictograms (the pictograms or hazard symbols may be presented as graphical reproductions of the symbols in black and white or as a description of the name of the symbol (e.g., skull and crossbones, flame).
- Precautionary statement(s).
- Description of any hazards not otherwise classified.

Section 3: Ingredients Information
This section provides information on the ingredients of the chemical on the SDS, including impurities and stabilizing additives. This section includes information on substances, mixtures, and all chemicals where a trade secret is claimed. The required information consists of:

- Substances.
- Chemical name and synonyms.
- Chemical Abstracts Service (CAS) number and other unique identifiers.
- Impurities and stabilizing additives, which are themselves classified and which contribute to the hazard classification of the chemical.
- Mixtures.
- Some information required for substances:
 - The chemical name and concentration (i.e., exact percentage) of all ingredients which are classified as health hazards and are present above their cut-off concentration limits.
 - The concentration (exact percentage) of each ingredient must be specified except concentration ranges may be used in the following situations:
 - Each ingredient is made.
 - There is batch-to-batch variation, or
 - The SDS is used for a group of substantially similar mixtures.
 - Details where a trade secret is claimed.
 - A statement that the specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret is required.

Section 4: First-Aid Measures

This section describes the most cases that should be given by personnel responding to an individual who has been exposed to the chemical. The required information consists of:

- Necessary first aid instructions by relevant routes of exposure (inhalation, skin and eye contact, and ingestion).
- Other signs or symptoms requiring symptoms or effects, and any symptoms that are acute or delayed.
- Recommendations for immediate medical care and special treatment needed, when necessary.

Section 5: Fire-Fighting Measures

This section provides recommendations for fighting a fire caused by the chemical. The required information consists of:

- Recommendations of suitable extinguishing equipment, and information about extinguishing equipment that is not appropriate for a particular situation.
- Advice on special hazards that may result from fire during the fire, such as any hazardous combustion products created when the chemical burns.

Section 6: Accidental Release Measures

This section provides recommendations on the appropriate response to spills, leaks, or releases. The required information consists of:

- Recommendations for containment and cleanup procedures to prevent or minimize exposure to people, properties, or the environment. It may also include recommendations distinguishing between responses for large and small spills (where the spill volume needs a specific and urgent action).
- Use of personal precautions (such as removal of ignition sources or providing suitable ventilation) and protective equipment to prevent the release of vapors, gases, and dusts.
- Emergency procedures, including instructions for evacuation, consulting experts, and other actions.
- Methods and materials used for containment (e.g., covering the drums and capping procedures).
- Cleanup procedures (e.g., appropriate techniques for decontamination, decontamination, cleaning or vacuuming, sufficient materials, and/or equipment required for containment).

Section 7: Handling and Storage

This section provides guidance on the safe handling practices and conditions for safe storage of chemicals. The required information consists of:

- Precautions for handling and storage of the chemical, including handling and storage of the chemical, minimizing the release of the chemical into the environment, and providing advice on general hygiene practices (e.g., eating, drinking, and smoking).
- Recommendations on the conditions for safe storage, including any incompatibilities.
- Provide advice on specific storage requirements (e.g., ventilation requirements).

Section 8: Exposure Controls/Personal Protection

This section contains the exposure controls and personal protection measures. The required information consists of:

- Appropriate engineering controls (e.g., use local exhaust ventilation, or use only in an enclosed system).
- Recommendations for personal protective measures to prevent illness or injury from exposure to chemicals, such as personal protective equipment (PPE) or injury from appropriate types of eye, face, skin or respiratory protection needed based on exposure to chemicals.
- Any hazard and potential risk for PPE, including skin or respiratory (e.g., type of glove material, such as PVC or nitrile rubber gloves, and breakthrough time of the glove).
