

THE NATURE OF SCIENCE & SCIENTIFIC METHOD

1. What is Science?

Science is not just a subject in school. Science is a way of studying the world. The word **science** comes from the Latin word that means "knowledge". More specifically, science is a way to learn or gain knowledge about the world by observing and investigating. Therefore, science is both a body of knowledge and a process.

2. What are the Major Categories of Science?

Science covers many different topics, including astronomy, biology, physics, and anatomy. Despite the huge variety, scientific topics can be classified into 3 main categories, as summarized in the table below.

Categories of Science		
Life Sciences	Physical Sciences	Earth Sciences
The study of living things	The study of matter and energy	The study of Earth and space

WORKSHEET

The Nature of Science and the Scientific Method

Scientists use a systematic way of gathering and analyzing information to find common sets of steps used in an investigation. The diagram on the right shows the six common steps found in the scientific method.

State the Problem

Many scientific investigations begin with a question about how or why something happens in nature. The **problem statement** describes what a scientist is going to investigate. Sometimes, problem statements are broad ones, but often they are when an investigation has finished and the results lead to new questions or that the investigation did not work as expected and scientists are wondering why.

Gather Information

Before starting an investigation, scientists research what is already known about the problem. To do this, they gather and study observations and conclusions from reliable sources.

Form a Hypothesis

Once research has been performed, scientists use this information to construct a hypothesis. A hypothesis is a possible explanation for a question based on what a scientist knows or observes. A hypothesis makes a

The Nature of Science Dorothy Warren, 2001 There are many different approaches to science Many students in school have a view of science that is far removed from the real world practice of science and they too often consider science to be a defined body of knowledge and scientists to know all the answers Through a series of exercises this book tries to give students an awareness of the processes of science and of the nature of science as a changing body of knowledge with uncertainties and much remaining to be discovered It is hoped that by using it teachers can communicate to their students some of the wonder and excitement of science and encourage the development of future generations of scientists The Nature of Science includes a range of activities designed to look at different aspects of the nature of science and to teach investigative skills to 11-19 year old students It contains teachers notes background information photocopiable student worksheets and answers

Leanne Aitken, Andrea Marshall, Wendy Chaboyer, 2015-10-01 With each edition ACCCN's Critical Care Nursing has built on its highly respected reputation. Its contributors aim to encourage and challenge practising critical care nurses and students to develop world class critical care nursing skills in order to ensure delivery of the highest quality care. Endorsed by the Australian College of Critical Care Nurses (ACCCN), this 3rd edition presents the expertise of foremost critical care leaders and features the most recent evidence based research and up to date advances in clinical practice, technology, procedures and standards. Expanded to reflect the universal core elements of critical care nursing practice, authors Aitken, Marshall and Chaboyer have retained the specific information that captures the unique elements of contemporary critical care nursing in Australia, New Zealand and other similar practice environments. Structured in three sections, ACCCN's Critical Care Nursing 3e addresses all aspects of critical care nursing including patient care and organisational issues while highlighting some of the unique and complex aspects of specialty critical care nursing practice such as paediatric considerations, trauma management and organ donation. Presented in three sections: Scope of Critical Care, Principles and Practice of Critical Care, Speciality Practice, Focus on concepts that underpin practice: essential physical, psychological, social and cultural care. New case studies elaborate on relevant care issues. Practice tips highlight areas of care particularly relevant to daily clinical practice. Learning activities support knowledge, reflective learning and understanding. Additional case studies with answers available on Evolve. NEW chapter on Postanaesthesia recovery. Revised coverage of metabolic and nutritional considerations for the critically ill patient. Aligned with the NEW ACCCN Standards for Practice.
