

Sir Isaac Newton

Isaac Newton was born on Dec. 25, 1642 in Woolsthorpe, Lincolnshire, England. He was expected to become a farmer like his late father, but he lacked the skills. Instead, he studied math and science at Trinity College, Cambridge, where he eventually became a professor in 1669.

While teaching at Cambridge, Newton published his most influential paper on modern science in 1687 titled, "The Mathematical Principles of Natural Philosophy;" the *Principia*. Inside the publication, were his Laws of Motion, which initially gave Newton his fame.

Years later, Newton retired from Cambridge in 1696, and began working for the Royal Mint (coin manufacturers); yet, he didn't stop dabbling in science. He enjoyed experimenting with prisms and found that light passing through a prism created a spectrum of colors. After numerous experiments, he published his theory of light in *Optics*. One year after its publication, Queen Anne knighted Newton in recognition of his scientific achievements.

On March 20, 1727, at the age of 85, Sir Isaac Newton passed away in his sleep. He was laid to rest at Westminster Abbey.
