**Transparency in Assessment - Exploring the**

**Influence of Explicit Assessment Criteria** Anders Jönsson, Frans Prins, 2019-04-03 In many schools and higher education institutions it has become common practice to share assessment criteria with students Sometimes it is required for accountability purposes at other times criteria are used as a means to communicate expectations to students However the idea that explicit assessment criteria should be shared with students has been contested On the one hand research has shown that explicit criteria may positively affect student performance reduce their anxiety as well as support students use of self regulated learning strategies On the other hand there are fears that explicit criteria may have a restraining influence on students learning as well as limiting their autonomy and creativity There are also indications of students becoming more performance oriented as opposed to learning oriented when being provided with explicit assessment criteria Taken together it is not fully understood under which circumstances it is productive for student learning to share explicit assessment criteria and under which circumstances it is not In particular empirical research on the proposed negative effects of sharing criteria with learners is limited and most fears voiced in the literature are based on individual experiences and anecdotal evidence In this book we therefore bring different perspectives on transparency in assessment together in order to further our understanding of how students are influenced by the use of explicit assessment criteria A deeper understanding of the influence of explicit assessment criteria on students understanding of criteria motivation and learning is equally imperative for future research and educational practice both of which need to go beyond individual opinions and convictions

Novel Diffusion-Based Models for Image Restoration and Interpolation Tudor Barbu, 2018-07-02 This book covers two essential PDE based image processing fields image denoising and image inpainting It describes the state of the art PDE

based image restoration and interpolation inpainting techniques focusing on the latest advances in PDE based image processing and analysis and explores novel techniques involving diffusion based models and variational schemes The PDE and variational schemes clearly outperform the conventional approaches in these areas and can successfully remove image noise and reconstruct missing or highly degraded regions while preserving the essential features and avoiding unintended effects The book addresses researchers and graduate students but is also well suited for professionals in both the mathematics and electrical engineering domains as it provides rigorous mathematical investigations of the image processing models described as well as mathematical treatments for the numerical approximation schemes of these differential models
