Teaching Reading Comprehension to English Learners in Secondary Schools: A Research-Based Approach Cekiso, Madoda, Olifant, Florence, Mokhtari, Kouider, 2025-04-23 Teaching reading comprehension to English learners ELs in secondary schools presents unique challenges as these students must navigate the complexities of academic texts and the intricacies of language acquisition. Effective instruction requires a research-based approach that considers the diverse linguistic, cultural, and cognitive backgrounds of these learners. Recent studies highlight the importance of integrating strategies that build both language proficiency and content knowledge, essential for helping ELs develop the skills needed to comprehend complex materials. Fostering metacognitive awareness through strategies like summarizing, questioning, and making connections can empower students to become active and strategic readers. This approach recognizes the need for a supportive, inclusive classroom environment that encourages language development while promoting academic achievement in content areas. Further research may help educators provide English learners with the tools to thrive as capable readers in secondary school. Teaching Reading Comprehension to English Learners in Secondary School: A Research-Based Approach explores various aspects of teaching reading comprehension to English Second Language (ESL) learners in secondary schools. It examines current challenges and evidence-based strategies in reading comprehension. This book covers topics such as language learning, reading strategies, and teacher training and is a useful resource for academicians, researchers, and scientists.

Future-proofing STEAME education in South Africa Rajendran Govender, Josef de Beer, Rouaan Maarman, Rajendra Chetty, 2025-02-28 This book aims to contribute to the discourse of finding innovative solutions to the myriad of challenges facing science education in South Africa. The book positions itself in the multi-disciplinary focus on Science, Technology, Engineering, Arts, Mathematics, and Entrepreneurship (STEAME) education rather than the traditional narrow focus on Science, Technology, Engineering, and Mathematics (STEM). The chapters in the book explore the challenges and opportunities facing STEAME education in a complex 21st century and at the advent of a society with a strong artificial intelligence component in its DNA. The leitmotif of the book is how engaging pedagogies could be utilised in the classroom to enhance self-directed learning, a *sine qua non* to future-proof South Africa's science and technological advancement. This is a book written by scholars for scholars. Its target audience includes academics and researchers in the field of science education and scholars engaged with innovative teaching pedagogies, particularly approaches that would enhance the achievement of learners in disadvantaged contexts. The chapters in the book, although eclectic in approach, all contribute to the central theme of the book. Most of the chapters lean on textual analyses, literature reviews, or concept papers which disclose new ideas before full validation.
