**e-Learning Ecologies** Bill Cope,Mary Kalantzis,2017-02-17 e Learning Ecologies explores transformations in the patterns of pedagogy that accompany e learning the use of computing devices that mediate or supplement the relationships between learners and teachers to present and assess learnable content to provide spaces where students do their work and to mediate peer to peer interactions Written by the members of the new learning research group this textbook suggests that e learning ecologies may play a key part in shifting the systems of modern education even as technology itself is pedagogically neutral The chapters in this book aim to create an analytical framework with which to differentiate those aspects of educational technology that reproduce old pedagogical relations from those that are genuinely innovative and generative of new kinds of learning Featuring case studies from elementary schools colleges and universities on the practicalities of new learning environments e Learning Ecologies elucidates the role of new technologies of knowledge representation and communication in bringing about change to educational institutions *Psychology and Mathematics Education* Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive
