multilingual testing and assessment has grown rapidly in recent years due to the widespread need to integrate immigrant populations into mainstream education and to provide fair and equitable forms of assessment for all students. However, a continuing emphasis on bilingual students has created a significant gap in testing and assessment research. This book addresses the need for research and guidance on testing multilingual students at its heart is the difference between designing multilingual tests and testing multilingual individuals. The author introduces an integrated approach to testing and assessment, a flexible approach that combines information about multilingual learners' knowledge, skills, and abilities with information about their language background and living environment. The book provides an overview of existing research conducted with multilingual populations, provides guidelines for test writers, teachers, and educators that outline the steps involved in the design, administration, scoring, and interpretation of tests for multiple language speakers, and demonstrates how to use the integrated approach to testing and assessment in a multilingual educational context.

All over the world, economic inclusion has risen to the top of the development discourse. A well-performing education system is central to achieving inclusive development, but the challenge of improving educational outcomes has proven to be unexpectedly difficult. Access to education has increased, but quality remains low, with weaknesses in governance comprising an important part of the explanation. *The Politics and Governance of Basic Education* explores the balance between hierarchical and horizontal institutional arrangements for the public provision of basic education. Using the vivid example of South Africa, a country that had ambitious goals at the outset of its transition from apartheid to democracy, it explores how the interaction of politics and institutions affects educational outcomes. By examining lessons learned from how South Africa failed to achieve many of its goals, it constructs an innovative alternative strategy for making progress, combining practical steps to achieve incremental gains to re-orient the system towards learning.
