Vector Calculus for Tamed Dirichlet Spaces Mathias Braun, 2025-01-08 View the abstract [The Quasispecies Equation and Classical Population Models](#) Raphaël Cerf, Joseba Dalmau, 2022-07-30 This monograph studies a series of mathematical models of the evolution of a population under mutation and selection Its starting point is the quasispecies equation a general non linear equation which describes the mutation selection equilibrium in Manfred Eigen s famous quasispecies model A detailed analysis of this equation is given under the assumptions of finite genotype space sharp peak landscape and class dependent fitness landscapes Different probabilistic representation formulae are derived for its solution involving classical combinatorial quantities like Stirling and Euler numbers It is shown how quasispecies and error threshold phenomena emerge in finite population models and full mathematical proofs are provided in the case of the Wright Fisher model Along the way exact formulas are obtained for the quasispecies distribution in the long chain regime on the sharp peak landscape and on class dependent fitness landscapes Finally several other classical population models are analyzed with a focus on their dynamical behavior and their links to the quasispecies equation This book will be of interest to mathematicians and theoretical ecologists biologists working with finite population models **On the Theory of Maass Wave Forms** Tobias Mühlenbruch, Wissam Raji, 2020-05-06 This textbook provides a rigorous analytical treatment of the theory of Maass wave forms Readers will find this unified presentation invaluable as it treats Maass wave forms as the central area of interest Subjects at the cutting edge of research are explored in depth such as Maass wave forms of real weight and the cohomology attached to Maass wave forms and transfer operators Because Maass wave forms are given a deep exploration this book offers an indispensable resource for those entering the field Early chapters present a brief introduction to the theory of classical modular forms with an emphasis on objects and results necessary to fully understand later material Chapters 4 and 5 contain the book s main focus L functions and period functions associated with families of Maass wave forms Other topics include Maass wave forms of real weight Maass cusp forms and weak harmonic Maass wave forms Engaging exercises appear throughout the book with solutions available online On the Theory of Maass Wave Forms is ideal for graduate students and researchers entering the area Readers in mathematical physics and other related disciplines will find this a useful reference as well Knowledge of complex analysis real analysis and abstract algebra is required **The Irreducible Subgroups of Exceptional Algebraic Groups** Adam R. Thomas, 2021-06-18 This paper is a contribution to the study of the subgroup structure of exceptional algebraic groups over algebraically closed fields of arbitrary characteristic Following Serre a closed subgroup of a semisimple algebraic group G is called irreducible if it lies in no proper parabolic subgroup of G In this paper we complete the classification of irreducible connected subgroups of exceptional algebraic groups providing an explicit set of representatives for the conjugacy classes of such subgroups Many consequences of this classification are also given These include results concerning the representations of such subgroups on various G modules for example the

conjugacy classes of irreducible connected subgroups are determined by their composition factors on the adjoint module of G with one exception A result of Liebeck and Testerman shows that each irreducible connected subgroup X of G has only finitely many overgroups and hence the overgroups of X form a lattice We provide tables that give representatives of each conjugacy class of connected overgroups within this lattice structure We use this to prove results concerning the subgroup structure of G for example when the characteristic is 2 there exists a maximal connected subgroup of G containing a conjugate of every irreducible subgroup A_1 of G
