1	Logical Reasoning	Students should be able to: (1) give the meaning of simple and compound statements. (2) list the five logical operations and their symbols. (3) write the truth value of a compound statement involving any of the five logical operations.	(1) Simple and compound statement. (2) Logical operation and the truth table.	(1) Examples to explain one statement or proposition as a sentence which is either true or false and not both. (2) Gives collection of simple and compound statement and guides students to distinguish them. (3) Leads students to construct truth table chart for each of the five logical operations.	(1) Give examples and non examples of simple statements. (2) Write examples of compound statements. (3) Construct truth table chart of the five logical operations.	(1) Charts showing examples of simple statement, true and false statement. (3) Truth table chart.	Students to: (1) state meaning of simple and compound statements. (2) write true or false statements. (3) give examples of compound statement. (4) list the five logical operations and their symbols.
2	Logical Reasoning	Students should be able to: (1) use truth table to prove that (a) a contra positive is equivalent to conditional statement. (2) a converse is equivalent to an inverse of a conditional statement. (3) apply contra positive and inverse in proving theories. (4) use venn diagram for logical operations.	(1) Conditional statements and indirect proofs. (2) Use of Venn diagrams for logical operations.	(1) Guides students to state the converse, inverse and contra positive of a given conditional statement. Example if two angles are vertically opposite then they are equal (conditional statement) . (2) If two angles are equal then they are vertically opposite (converse). If two angles are not vertically opposites they are not equal (inverse). (3) Use truth table to show that contra positive-conditional statement. (4) Leads students to draw Venn diagrams logical operations.	Prove the converse, inverse and contra positive if a given example statement is valid or fallacious practice the drawing of Venn diagrams for logical operations.	Truth tables.	Students to: (1) prove that a contra positive is equivalent to the conditional statement. (2) a converse is equivalent to an inverse of a conditional statement. (3) apply contra positives and inverses in proving theories. (4) draw venn diagrams for logical operations.

Simpson,1999 From the point of view of the foundations of mathematics this definitive work by Simpson is the most anxiously awaited monograph for over a decade The subsystems of second order arithmetic provide the basic formal systems

normally used in our current understanding of the logical structure of classical mathematics Simpson provides an encyclopedic treatment of these systems with an emphasis on Hilbert's program where infinitary mathematics is to be secured or reinterpreted by finitary mathematics and the emerging reverse mathematics where axioms necessary for providing theorems are determined by deriving axioms from theorems The classical mathematical topics treated in these axiomatic terms are very diverse and include standard topics in complete separable metric spaces and Banach spaces countable groups rings fields and vector spaces ordinary differential equations fixed points infinite games Ramsey theory and many others The material with its many open problems and detailed references to the literature is particularly valuable for proof theorists and recursion theorists The book is both suitable for the beginning graduate student in mathematical logic and encyclopedic for the expert Harvey Friedman Ohio State University *Mathematical Work in Educational Context* Alain Kuzniak, Elizabeth Montoya-Delgadillo, Philippe R. Richard, 2023-04-02 This book is a friendly and complete introduction to one of the most comprehensive contemporary theories of mathematics teaching and learning By focusing on mathematical work performed by students and teachers during mathematics session the theory of Mathematical Workings Spaces MWS has opened up new perspectives and avenues on mathematics education and mathematical thinking In particular it enables the identification of students knowledge production processes and helps teachers to shape them The first part of the book explores the heart of the theory and aims to further describe and understand epistemological and cognitive aspects of mathematical work The second part develops the different MWS dedicated to observing how this work depends on the expectations of educational systems how it is formed and taught and how individuals appropriate it In the last part some applications and perspectives are discussed regarding topics of major importance today in mathematics education which relate to technological and digital tools teacher training and modeling activities In line with the spirit of the theory the book was written to reflect the conceptual unity at the heart of the theory of MWS and at the same time to show the freedom and diversity of approaches given space therein Written for researchers and professionals in mathematics education it offers plenty of concrete examples from different educational systems around the world to illustrate the theoretical concepts and show the applicability of the theory to practice and research **Integrated Mathematics Scheme** Walter Warwick Sawyer, 1985 **Second Course in the New Mathematics** Edward Ira Edgerton, Perry Amherst Carpenter, 1948 **Activities in Mathematics, Second Course, Graphs**, 1971 **A Second Course in Mathematics for Technical Students** Percy James Haler, 1924 **Integrated Mathematics Scheme** Peter Kaner, 1982
