SECTION B		
Section B consists of 5 questions of 2 marks each.		
21.	<p>Let us assume, to the contrary, that $\sqrt{2}$ is rational. So, we can find integers a and b such that $\sqrt{2} = \frac{a}{b}$ where a and b are coprime. So, $b\sqrt{2} = a$. Squaring both sides, we get $2b^2 = a^2$. Therefore, 2 divides a^2 and so 2 divides a. So, we can write $a = 2c$ for some integer c. Substituting for a, we get $2b^2 = 4c^2$, that is, $b^2 = 2c^2$. This means that 2 divides b^2, and so 2 divides b. Therefore, a and b have at least 2 as a common factor. But this contradicts the fact that a and b have no common factors other than 1. This contradiction has arisen because of our incorrect assumption that $\sqrt{2}$ is rational. So, we conclude that $\sqrt{2}$ is irrational.</p>	<p>$\frac{1}{2}$</p> <p>$\frac{1}{2}$</p> <p>$\frac{1}{2}$</p> <p>$\frac{1}{2}$</p>

Using Noise to Characterize Vision Rémy Allard, Jocelyn Faubert, Denis G. Pelli, 2016-03-02 Noise has been widely used to investigate the processing properties of various visual functions e g detection discrimination attention perceptual learning averaging crowding face recognition in various populations e g older adults amblyopes migrainers dyslexic children using noise along various dimensions e g pixel noise orientation jitter contrast jitter The reason to use external noise is generally not to characterize visual processing in external noise per se but rather to

reveal how vision works in ordinary conditions when performance is limited by our intrinsic noise rather than externally added noise For instance reverse correlation aims at identifying the relevant information to perform a given task in noiseless conditions and measuring contrast thresholds in various noise levels can be used to understand the impact of intrinsic noise that limits sensitivity to noiseless stimuli Why use noise Since Fechner named it psychophysics has always emphasized the systematic investigation of conditions that break vision External noise raises threshold hugely and selectively In hearing Fletcher used noise in his famous critical band experiments to reveal frequency selective channels in hearing Critical bands have been found in vision too More generally the big reliable effects of noise give important clues to how the system works And simple models have been proposed to account for the effects of visual noise As noise has been more widely used questions have been raised about the simplifying assumptions that link the processing properties in noiseless conditions to measurements in external noise For instance it is usually assumed that the processing strategy or mechanism used to perform a task and its processing properties e g filter tuning are unaffected by the addition of external noise Some have suggested that the processing properties could change with the addition of external noise e g change in filter tuning or more lateral masking in noise which would need to be considered before drawing conclusions about the processing properties in noiseless condition Others have suggested that different processing properties or mechanisms could be solicited in low and high noise conditions complicating the characterization of processing properties in noiseless condition based on processing properties identified in noise conditions The current Research Topic probes further into what the effects of visual noise tell us about vision in ordinary conditions Our Editorial gives an overview of the articles in this special issue [The Truth About Our Schools](#) Melissa Benn, Janet Downs, 2015-11-06 A superb crucial blistering expose of all the myths about our education system that are all too often used to attack it Melissa Benn again proves why she is one of country s most formidable education campaigners and why the powerful should fear her Owen Jones Guardian columnist and best selling author Never has it been more urgent to publicise the truth about what works and doesn t work in our education system Debunking the ideology of marketisation and exposing the half truths that pass for objective reporting Benn and Downs meticulously lay out the evidence that a national system of comprehensive schools delivers the best outcomes This hugely important book should be required reading for each new Education Secretary Caroline Lucas MP Opinions about comprehensive education are often made into easy to swallow sound bites by media and politicians alike and whilst the benefits of a genuinely comprehensive education for all pupils are obvious untruths have unwittingly evolved into hard facts Based on Melissa Benn and Janet Downs work as part of the pioneering Local Schools Network The Truth About Our Schools calls for us to urgently and articulately challenge unquestioned myths about state education Benn and Downs have meticulously built an argument for its still enormously vital role and rigorously challenge assumptions that Comprehensive education has failed Local authorities control and hold back schools Choice competition and markets are the route to educational success Choice will improve

education in England the free school model Academies raise standards Teachers don't need qualifications Private schools have the magic DNA Progressive education lowers standards Anyone who thinks that comprehensive education cannot deliver that local authorities are the chief block to improving our school system that competition and markets are the route to educational success and that private schools hold the magic DNA that can simply be transferred to other state schools will have their beliefs shaken by this blisteringly incisive book Digital Twin Technologies and Smart Cities Maryam

Farsi,Alireza Daneshkhah,Amin Hosseinian-Far,Hamid Jahankhani,2019-07-22 This book provides a holistic perspective on Digital Twin DT technologies and presents cutting edge research in the field It assesses the opportunities that DT can offer for smart cities and covers the requirements for ensuring secure safe and sustainable smart cities Further the book demonstrates that DT and its benefits with regard to data visualisation real time data analytics and learning leading to improved confidence in decision making reasoning monitoring and warning to support accurate diagnostics and prognostics acting using edge control and what if analysis and connection with back end business applications hold significant potential for applications in smart cities by employing a wide range of sensory and data acquisition systems in various parts of the urban infrastructure The contributing authors reveal how and why DT technologies that are used for monitoring visualising diagnosing and predicting in real time are vital to cities sustainability and efficiency The concepts outlined in the book represents a city together with all of its infrastructure elements which communicate with each other in a complex manner Moreover securing Internet of Things IoT which is one of the key enablers of DT's is discussed in details and from various perspectives The book offers an outstanding reference guide for practitioners and researchers in manufacturing operations research and communications who are considering digitising some of their assets and related services It is also a valuable asset for graduate students and academics who are looking to identify research gaps and develop their own proposals for further research **Redefining Ceasefires** Marika Sosnowski,2023-05-25 Uses original evidence and first hand interviews to demonstrate how ceasefires serve as tools for wartime order and statebuilding
