**Higher Structures in Topology, Geometry, and Physics** Ralph M. Kaufmann,Martin Markl,Alexander A.

Voronov,2024-07-03 This volume contains the proceedings of the AMS Special Session on Higher Structures in Topology Geometry and Physics held virtually on March 26 27 2022 The articles give a snapshot survey of the current topics surrounding the mathematical formulation of field theories There is an intricate interplay between geometry topology and algebra which captures these theories The hallmark are higher structures which one can consider as the secondary algebraic or geometric background on which the theories are formulated The higher structures considered in the volume are generalizations of operads models for conformal field theories string topology open closed field theories BF BV formalism actions on Hochschild complexes and related complexes and their geometric and topological aspects      *Memorandum -* ,1961      *Nuclear Science Abstracts* ,1960      *Paper* ,1970      *The Adams Spectral Sequence for Topological Modular Forms* Robert R. Bruner,John Rognes,2021-09-30 The connective topological modular forms spectrum  $tmf$  is in a sense initial among elliptic spectra and as such is an important link between the homotopy groups of spheres and modular forms A primary goal of this volume is to give a complete account with full proofs of the homotopy of  $tmf$  and several  $tmf$  module spectra by means of the classical Adams spectral sequence thus verifying correcting and extending existing approaches In the process folklore results are made precise and generalized Anderson and Brown Comenetz duality and the corresponding dualities in homotopy groups are carefully proved The volume also includes an account of the homotopy groups of spheres through degree 44 with complete proofs except that the Adams conjecture is used without proof Also presented are modern stable proofs of classical results which are hard to extract from the literature Tools used in this book include a multiplicative spectral sequence generalizing a construction of Davis and Mahowald and computer software which computes the cohomology of modules over the Steenrod algebra and products therein Techniques from commutative algebra are used to make the calculation precise and finite The  $H$  ring structure of the sphere and of  $tmf$  are used to determine many differentials and relations      **Research Memorandum** ,1947      *Serials Holdings* Linda Hall Library,1983      **White Paper on the Report of the Committee to Investigate Causes of Riots and Disturbances in Kaduna State, 6th-12th March, 1987** Kaduna State (Nigeria),Kaduna State (Nigeria).
