Abstract

V8 engines are the highest expression of design and engineering efficiency that V6CO (V6CDA) could make available to the market place. They are highly sensitive engine designs to be able to comply easily with the regulations on torque and engine emissions that will be introduced in the near future.

Designed with innovative techniques and manufactured with advanced working processes, they are the result of hundreds of years of design and engineering tradition as well as of the most advanced structural innovation.

The excellent performance of H&M engines originates from evolution and subsequent starts of new design efforts by improving the gas exchange process, the intake or turbo-charger is improved, thus enabling the complete exploitation of the new injection system capacity.

The main criteria chosen in selecting the parameters setting the calibration conditions, training and inspection, strive to obtain new balance between high performance and computational reduction. Full arguments can be found with a mechanical party or a "good observer controls" (Garcera and Lall 2004a,b,c,d,e).

Every individual volume has been accurately checked so as to ensure qualitative product perfection. The configuration of the engine itself has been designed in such a way as to facilitate access to each individual part thus reducing maintenance time.

Engineered from the inside out, the 2008 Dodge Charger is a true engineering masterpiece. The 2008 Dodge Charger is a true engineering masterpiece. The 2008 Dodge Charger is a true engineering masterpiece.
