Journal of optimization theory and applications [Anonymus AC09591845],1967      **Multiple Criteria Decision Making Theory and Application** G. Fandel,T. Gal,2012-12-06 He consider a cone dominance problem given a preference cone  $LP$  and a set  $n \times R$  of available or feasible alternatives the problem is to identify the non dominated elements of  $X$  The nonzero elements of  $LP$  are assumed to model the do nance structure of the problem so that  $y \in X$  dominates  $x \in X$  if  $Y \times P$  for some nonzero  $p \in LP$  Consequently  $x \in X$  is nondominated if and only if  $x \in LP \cap X \times 1,1$  He will also refer to nondominated points as efficient points in  $X$  with respect to  $LP$  and we will let  $EF(X,JP)$  denote the set of such efficient points This cone dominance problem draws its roots from two separate but related origins The first of these is multi attribute decision making in which the elements of the set  $X$  are endowed with various attributes each to be maximized or minimized      **Optimal Spacecraft Rotational Maneuvers** J.L. Junkins,J.D. Turner,2012-12-02 This monograph has grown out of the authors recent work directed toward solving a family of problems which arise in maneuvering modern spacecraft The work ranges from fundamental developments in analytical dynamics and optimal control to a significant collection of example applications The primary emphasis herein is upon the most central analytical and numerical methods for determining optimal rotational maneuvers of spacecraft The authors focus especially upon the large angle nonlinear maneuvers and also consider large rotational maneuvers of flexible vehicles with simultaneous vibration suppression arrest Each chapter includes a list of references The book provides much new material which will be of great interest to practising professionals and advanced graduate students working in the general areas of spacecraft technology applied mathematics optimal control theory and numerical optimization Chapter 11 in particular presents new information that will be found widely useful for terminal control and tracking maneuvers      **Nonsmooth/Nonconvex Mechanics** David Yang Gao,Raymond W. Ogden,Georgios E. Stavroulakis,2013-12-01 Nonsmooth and nonconvex models arise in several important applications of mechanics and engineering The interest in this field is growing from both mathematicians and engineers The study of numerous industrial applications including contact phenomena in statics and dynamics or delamination effects in composites require the consideration of nonsmoothness and nonconvexity The mathematical topics discussed in this book include variational and hemivariational inequalities duality complementarity variational principles sensitivity analysis eigenvalue and resonance problems and minimax problems Applications are considered in the following areas among others nonsmooth statics and dynamics stability of quasi static evolution processes friction problems adhesive contact and debonding inverse problems pseudoelastic modeling of phase transitions chaotic behavior in nonlinear beams and nonholonomic mechanical systems This volume contains 22 chapters written by various leading researchers and presents a cohesive and authoritative overview of recent results and applications in the area of nonsmooth and nonconvex mechanics Audience Faculty graduate students and researchers in applied mathematics optimization control and engineering      *Theory of Sensitivity in Dynamic Systems*
