Programming and Problem Solving with Java Nell B. Dale, Chip Weems, 2008

Extensively revised the new Second Edition of Programming and Problem Solving with Java continues to be the most student friendly text available

The authors carefully broke the text into smaller more manageable pieces by reorganizing chapters allowing student to focus more sharply on the important information at hand

Using Dale and Weems highly effective

progressive objects approach students begin with very simple yet useful class design in parallel with the introduction of Java's basic data types arithmetic operations control structures and file I/O. Students see first hand how the library of objects steadily grows larger enabling ever more sophisticated applications to be developed through reuse. Later chapters focus on inheritance and polymorphism using the firm foundation that has been established by steadily developing numerous classes in the early part of the text. A new chapter on Data Structures and Collections has been added making the text ideal for a one or two semester course. With its numerous new case studies end of chapter material and clear descriptive examples the Second Edition is an exceptional text for discovering Java as a first programming language. **Laboratory Course** Mr. Rohit Manglik, 2024-03-03 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources. Explorations in Computing John S. Conery, 2010-10-29 Based on the author's introductory course at the University of Oregon *Explorations in Computing* An Introduction to Computer Science focuses on the fundamental idea of computation and offers insight into how computation is used to solve a variety of interesting and important real world problems. Taking an active learning approach the text encourages students to explore computing ideas by running programs and testing them on different inputs. It also features illustrations by Phil Foglio winner of the 2009 and 2010 Hugo Award for Best Graphic Novel Classroom Tested Material. The first four chapters introduce key concepts such as algorithms and scalability and hone practical lab skills for creating and using objects. In the remaining chapters the author covers divide and conquer as a problem solving strategy the role of data structures issues related to encoding data computer architecture random numbers challenges for natural language processing computer simulation and genetic algorithms. Through a series of interactive projects in each chapter students can experiment with one or more algorithms that illustrate the main topic. Requiring no
