Process of Evolution

After finishing reading this chapter, you should be able to:

- Describe contributions to our understanding of how life on Earth has changed over time.
- How genetic mutations and variations in traits are important for natural selection to occur.
- How the theory of evolution explains the great variety and commonality of all lifeforms on Earth.

Consider the case of life.... whilst the planet has just cooled and the first flames of plants show as simple a beginning as life on Earth and wonderful from that, and are being moved.

and the first life forms of plants.

Plants

When you see a building wall or a tree trunk covered with ivy? If you climb at the top you will notice groups of leaves and flowers about every 40 centimeters along the stem. You may already be past experiences that a plant's roots usually grow in the ground. There they anchor the plant in the soil and take in water and food for the plant. Ivy plants have roots that grow in the ground, also produce stems along their stems. Their stems are called aerial stems may wonder what function these stems have. The aerial stems of ivy plants, in fact, the ivy is a wall or tree trunk. In fact, it has roots that enable the ivy to climb up from the ground. (See page 4.)

Questions may come to mind at this point. How did ivy come to this special type of root? How did ivy plants develop an ability to climb the ability to climb help an ivy plant survive?
