Chemical Engineering Computation with MATLAB® Yeong Koo Yeo, 2017-08-01 Most problems encountered in chemical engineering are sophisticated and interdisciplinary. Thus it is important for today's engineering students, researchers, and professionals to be proficient in the use of software tools for problem solving. MATLAB is one such tool that is distinguished by the ability to perform calculations in vector matrix form, a large library of built-in functions, strong structural language, and a rich set of graphical visualization tools. Furthermore, MATLAB integrates computations, visualization, and programming in an intuitive user-friendly environment. **Chemical Engineering Computation with MATLAB** presents basic to advanced levels of problem solving techniques using MATLAB as the computation environment. The book provides examples and problems extracted from core chemical engineering subject areas and presents a basic instruction in the use of MATLAB for problem solving. It provides many examples and exercises and extensive problem solving instruction and solutions for various problems. Solutions are developed using fundamental principles to construct mathematical models, and an equation-oriented approach is used to generate numerical results. A wealth of examples demonstrate the implementation of various problem solving approaches and methodologies for problem formulation, problem solving, analysis, and presentation, as well as visualization and documentation of results. This book also provides aid with advanced problems that are often encountered in graduate research and industrial operations, such as nonlinear regression, parameter estimation, differential systems, two-point boundary value problems, and partial differential equations and optimization.

Principles of Pharmacology David E. Golan, 2008 This primary textbook for a first course in pharmacology offers an integrated systems-based and mechanism-based approach to understanding drug therapy. Each chapter focuses on a target organ system, begins with a clinical case, and incorporates cell biology, biochemistry, physiology, and pathophysiology to explain how and why different drug classes are effective for diseases in that organ system. Over 400 two-color illustrations show molecular, cellular, biochemical, and pathophysiologic processes underlying diseases and depict targets of drug therapy. Each chapter includes a drug summary table presenting mechanism, clinical applications, adverse effects, contraindications, and therapeutic considerations. New chapters explain how drugs produce adverse effects and describe the life cycle of drug development. The fully searchable online text and an image bank are available on thePoint.

Opening Doors Janet Elder, Joe Cortina, 2013-01-10 CONNECT READING provides a personalized learning plan for each student, continually developed and refined as students achieve mastery. Each student plan is created through an individualized diagnostic that evaluates skills from 7th grade level through college readiness for second language learners, international students, adult students, and traditional high schoolers. Offered completely online, CONNECT READING can be used in conjunction with NEW WORLDS or OPENING DOORS, which provide a printed experience that teaches critical reading skills through close reading of anthologized chapters from best-selling undergraduate texts in Psychology, Sociology, Business, and more.
