Knowledge in Middle School Mathematics Sergei Abramovich, Michael L. Connell, 2021-05-10 This textbook is for prospective teachers of middle school mathematics It reflects on the authors experience in offering various mathematics education courses to prospective teachers in the US and Canada In particular the content can support one or more of 24 semester hour courses recommended by the Conference Board of the Mathematical Sciences 2012 for the mathematical preparation of middle school teachers The textbook integrates grade appropriate content on all major topics in the middle school mathematics curriculum with international recommendations for teaching the content making it relevant for a global readership The textbook emphasizes the inherent connections between mathematics and real life since many mathematical concepts and procedures stem from common sense something that schoolchildren intuitively possess This focus on teaching formal mathematics with reference to real life and common sense is essential to its pedagogical approach In addition the textbook stresses the importance of being able to use technology as an exploratory tool and being familiar with its strengths and weaknesses In keeping with this emphasis on the use of technology both physical manipulatives and digital commonly available educational software it also explores e.g the use of computer graphing software for digital fabrication In closing the

textbook addresses the issue of creativity as a crucial aspect of education in the digital age in general and in mathematics education in particular
