Valentina Tamma, Stephen Cranefield, Timothy W. Finin, Steven Willmott, 2006-03-30 There is a growing interest in the use of
ontologies for multi agent system app cations On the one hand the agent paradigm is successfully employed in those
applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to
achieve a common goal On the other hand ontologies have established themselves as a powerful tool to enable kno edge
sharing and a growing number of applications have bene ted from the use of ontologies as a means to achieve semantic
interoperability among heterogeneous distributed systems In principle ontologies and agents are a match made in heaven
that has failed to happen What makes a simple piece of software an agent is its ability to communicate in a social
environment to make autonomous decisions and to be proactive on behalf of its user Communication ultimately depends on
und standing the goals preferences and constraints posed by the user Autonomy is
the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for
user prompting Communication but also autonomy and proactiveness depend on knowledge The ability to c municate
depends on understanding the syntax terms and structure and the semantics of a language Ontologies provide the terms
used to describe a domain and the semantics associated with them In addition ontologies are often comp mented by some
logical rules that constrain the meaning assigned to the terms These constraints are represented by inference rules that can
be used by agents to perform the reasoning on which autonomy and proactiveness are based Customer Retention in the
Automotive Industry Michael D. Johnson, Andreas Herrmann, Frank Huber, Anders Gustafsson, 2012-12-06 The intensely
competitive global automotive industry is in the midst of both a quality evolution and management transfo nnation In an
evolutionary fashion industry attention has progressed from a focus on internal quality to external perceptions of customer
satisfaction to subsequent customer retention and profitability More transfo nnational is the change in the way automotive

companies operate and manage themselves An industry once dominated at a product level by engineering and a management level by finance is becoming a cross functional customer oriented industry Understanding the links from quality to satisfaction to retention has become a key to financial and organizational success as the automotive industry enters the new millennium We are fortunate in this regard to have assembled a diverse group of both academic and automotive industry contributors to offer a variety of insights into these links After describing the ongoing changes in the automotive industry in more detail this introductory chapter describes a framework for linking quality satisfaction and retention The framework is used to introduce each of the individual chapters and highlight its contribution Although our primary emphasis is on the automotive industry the implications of the research and lessons learned extend far beyond If anything the automotive industry is a prototypical competitive global industry that faces a myriad of business issues These include among others issues pertaining to product development service development process improvement product quality service quality supplier relationships internal customer satisfaction external customer satisfaction retailing promotion pricing franchising and technology management
