Light signal perception and transduction works in perfect coordination with a wide variety of plant growth regulators in regulating various plant developmental processes and these aspects are explored in Unit III. Unit IV investigates plants' various structural and biochemical adaptive mechanisms to enable them to survive under a wide variety of abiotic stress conditions: salt, temperature, flooding, drought, pathogen and herbivore attack, biotic interactions. Lastly, Unit V addresses the large number of secondary metabolites produced by plants that are medicinally important for mankind and their applications in biotechnology and agriculture.
