Approximate Analytical Methods for Solving Ordinary Differential Equations T.S.L Radhika, T. K.V. Iyengar, T. Raja Rani, 2014-10-31 *Approximate Analytical Methods for Solving Ordinary Differential Equations* ODEs is the first book to present all of the available approximate methods for solving ODEs eliminating the need to wade through multiple books and articles. It covers both well established techniques and recently developed procedures including the classical series solution method, diverse perturbation methods, pioneering asymptotic methods and the latest homotopy methods. The book is suitable not only for mathematicians and engineers but also for biologists, physicists and economists. It gives a complete description of the methods without going deep into rigorous mathematical aspects. Detailed examples illustrate the application of the methods to solve real world problems. The authors introduce the classical power series method for solving differential equations before moving on to asymptotic methods. They next show how perturbation methods are used to understand physical phenomena whose mathematical formulation involves a perturbation parameter and explain how the multiple scale technique solves problems whose solution cannot be completely described on a single timescale. They then describe the Wentzel-Kramers and Brillouin-WKB method that helps solve both problems that oscillate rapidly and problems that have a sudden change in the behavior of the solution function at a point in the interval. The book concludes with recent nonperturbation methods that provide solutions to a much wider class of problems and recent analytical methods based on the concept of homotopy of topology.

Control of Distributed Parameter Systems 1982 Jean-Pierre Babary, Laurent Letty, 2014-05-16 *Control of Distributed Parameter Systems* 1982 covers the proceedings of the Third International Federation of Automatic Control (IFAC) Symposium on Control of Distributed Parameter Systems. The book reviews papers that tackle issues concerning the control of distributed parameter systems such as modeling, identification, estimation, stabilization, optimization and energy systems. The topics that the book tackles include notes on optimal and estimation results of nonlinear systems, approximation of the parameter identification problem in distributed parameters systems and optimal control of a punctually located heat source. This text also encompasses the stabilization of nonlinear parabolic equations and the decoupling approach to the control of large spaceborne antenna systems. Stability of Hilbert space contraction semigroups and the tracking problem in the fractional representation approach are also discussed. This book will be of great interest to researchers and professionals whose work concerns automated control systems.

Slow Brain Oscillations of Sleep, Resting State and Vigilance, 2011-08-13 This volume of *Progress in Brain Research* documents research presented at the 26th International Summer School of Brain Research, Amsterdam, June/July 2010 and looks at how the oscillations that characterize brain activity vary between task performance, the EEG power and performance modulations, rest, the MRI default mode and other networks and sleep. The cortical slow oscillations. Studies over the past decade indicate that the study of these slow oscillations is essential for our understanding of plasticity, memory, brain structure from synapse to default mode.
