Contributions in Mathematics and Engineering Panos M. Pardalos, Themistocles M. Rassias, 2016-10-04 The contributions in this volume aim to deepen understanding of some of the current research problems and theories in modern topics such as calculus of variations optimization theory complex analysis real analysis differential equations and geometry Applications to these areas of mathematics are presented within the broad spectrum of research in Engineering Science with particular emphasis on equilibrium problems complexity in numerical optimization dynamical systems non smooth optimization complex network analysis statistical models and data mining and energy systems Additional emphasis is given to interdisciplinary research although subjects are treated in a unified and self contained manner The presentation of methods theory and applications makes this tribute an invaluable reference for teachers researchers and other professionals interested in pure and applied research philosophy of mathematics and mathematics education Some review papers published in this volume will be particularly useful for a broader audience of readers as well as for graduate students who search for the latest information Constantin Carathéodory's wide ranging influence in the international mathematical community was seen during the first Fields Medals awards at the International Congress of Mathematicians Oslo 1936 Two medals were awarded one to Lars V Ahlfors and one to Jesse Douglass It was Carathéodory who presented both their works during the opening of the International Congress This volume contains significant papers in Science and Engineering dedicated to the memory of Constantin Carathéodory and the spirit of his mathematical influence *Convexity and Concentration* Eric Carlen, Mokshay Madiman, Elisabeth M. Werner, 2017-04-20 This volume presents some of the research topics discussed at the 2014 2015 Annual Thematic Program Discrete Structures Analysis and Applications at the Institute of Mathematics and its Applications during the Spring 2015 where geometric analysis convex geometry and concentration phenomena were the focus Leading experts have written surveys of research problems making state of the art results more conveniently and widely available The volume is organized into two parts Part I contains those contributions that focus primarily on problems motivated by probability theory while Part II contains those contributions that focus primarily on problems motivated by convex geometry and geometric analysis This book will be of use to those who research convex geometry geometric analysis and probability directly or apply such methods in other fields **Mathematical Modelling in Solid Mechanics** Francesco dell'Isola, Mircea Sofonea, David Steigmann, 2017-03-10 This book presents new research results in multidisciplinary fields of mathematical and numerical modelling in mechanics The chapters treat the topics mathematical modelling in solid fluid and contact mechanics nonconvex variational analysis with emphasis to nonlinear solid and structural mechanics numerical modelling of problems with non smooth constitutive laws approximation of variational and hemivariational inequalities numerical analysis of discrete schemes numerical methods and the corresponding algorithms applications to mechanical engineering numerical aspects of non smooth mechanics with emphasis on developing accurate

and reliable computational tools mechanics of fibre reinforced materials behaviour of elasto plastic materials accounting for the microstructural defects definition of structural defects based on the differential geometry concepts or on the atomistic basis interaction between phase transformation and dislocations at nano scale energetic arguments bifurcation and post buckling analysis of elasto plastic structures engineering optimization and design global optimization and related algorithms The book presents selected papers presented at ETAMM 2016 It includes new and original results written by internationally recognized specialists

Complex Analysis and Dynamical Systems Mark Agranovsky, Anatoly Golberg, Fiana Jacobzon, David Shoikhet, Lawrence Zalcman, 2018-01-31 This book focuses on developments in complex dynamical systems and geometric function theory over the past decade showing strong links with other areas of mathematics and the natural sciences Traditional methods and approaches surface in physics and in the life and engineering sciences with increasing frequency the Schramm Loewner evolution Laplacian growth and quadratic differentials are just a few typical examples This book provides a representative overview of these processes and collects open problems in the various areas while at the same time showing where and how each particular topic evolves This volume is dedicated to the memory of Alexander Vasiliev

High Dimensional Probability IX Radosław Adamczak, Nathael Gozlan, Karim Lounici, Mokshay Madiman, 2023-06-05 This volume collects selected papers from the Ninth High Dimensional Probability Conference held virtually from June 15 19 2020 These papers cover a wide range of topics and demonstrate how high dimensional probability remains an active area of research with applications across many mathematical disciplines Chapters are organized around four general topics inequalities and convexity limit theorems stochastic processes and high dimensional statistics High Dimensional Probability IX will be a valuable resource for researchers in this area

Hermitian-Grassmannian Submanifolds Young Jin Suh, Yoshihiro Ohnita, Jiazu Zhou, Byung Hak Kim, Hyunjin Lee, 2017-09-14 This book presents the proceedings of the 20th International Workshop on Hermitian Symmetric Spaces and Submanifolds which was held at the Kyungpook National University from June 21 to 25 2016 The Workshop was supported by the Research Institute of Real and Complex Manifolds RIRCM and the National Research Foundation of Korea NRF The Organizing Committee invited 30 active geometers of differential geometry and related fields from all around the globe to discuss new developments for research in the area These proceedings provide a detailed overview of recent topics in the field of real and complex submanifolds

Fractal Functions Communication with Fractional Calculus A. Gowrisankar, T. M. C. Priyanka, Santo Banerjee, 2025-09-26 This book provides an in depth examination of fractal functions focusing on their self similar structures and the relatively simple construction procedures that make them a subject of fascination in mathematics and engineering By exploring fractal interpolation functions the book sheds light on naturally occurring phenomena that exhibit irregularity and non integer dimensions offering a fresh perspective on these complex mathematical constructs The chapters cover a range of topics including the foundational principles of fractal geometry the construction of fractal functions through iterated function

systems and the critical role of scaling parameters Readers will find expert analyses of affine and non affine fractal functions as well as discussions on the application of fractional calculus methods such as the Riemann Liouville and Caputo derivatives The book also explores the practical applications of fractal interpolation in areas like epidemiology and climate dynamics demonstrating the relevance of these mathematical concepts to real world problems This volume is an essential resource for researchers and scholars in mathematics engineering and related fields It offers a comprehensive overview of the current research on fractal functions and fractional calculus providing readers with the tools to understand and apply these concepts in their work Whether you are an academic seeking to deepen your knowledge or a practitioner looking to apply fractal functions to practical challenges this book is a valuable addition to your library It invites you to engage with the latest research and explore the potential of fractal functions in addressing complex scientific and engineering problems

Martingale Hardy Spaces and Summability of One-Dimensional Vilenkin-Fourier Series Lars-Erik Persson, George Tephnadze, Ferenc Weisz, 2022-11-22 This book discusses develops and applies the theory of Vilenkin Fourier series connected to modern harmonic analysis The classical theory of Fourier series deals with decomposition of a function into sinusoidal waves Unlike these continuous waves the Vilenkin Walsh functions are rectangular waves Such waves have already been used frequently in the theory of signal transmission multiplexing filtering image enhancement code theory digital signal processing and pattern recognition The development of the theory of Vilenkin Fourier series has been strongly influenced by the classical theory of trigonometric series Because of this it is inevitable to compare results of Vilenkin Fourier series to those on trigonometric series There are many similarities between these theories but there exist differences also Much of these can be explained by modern abstract harmonic analysis which studies orthonormal systems from the point of view of the structure of a topological group The first part of the book can be used as an introduction to the subject and the following chapters summarize the most recent research in this fascinating area and can be read independently Each chapter concludes with historical remarks and open questions The book will appeal to researchers working in Fourier and more broad harmonic analysis and will inspire them for their own and their students research Moreover researchers in applied fields will appreciate it as a sourcebook far beyond the traditional mathematical domains **Midland Schools**, 1920
