ICT Diffusion and Environmental Sustainability, 2nd edition Muhammad Majeed, Mara Madaleno, Muhammad Tayyab Sohail, 2025-09-16

Recently the adoption of information and communication technologies (ICT) has increasingly been recognized as crucial for economic prosperity, human development and well-being along with sustainable development. World Summit on the Information Society (WSIS) Forum emphasizes the role of ICT adoption in sustainability with due regard to the 2030 Agenda for Sustainable Development. The research has largely documented favorable economic outcomes of increasing the use of ICT. However, the ecological dimensions of ICT have received the least attention in the literature. In effect, ICT has influenced human life from many perspectives, including ecological aspects of life. The links of ICT with the environment are rather complex. On the one hand, ICT growth deteriorates the environment by increasing the production, use and disposal of ICT products. For instance, increasing e-waste and larger use of energy in manufacturing cause adverse effects on the environment. The life cycle theory of ICT suggests that several stages of the life of ICT result in pollution. The life cycle of ICT-related products spans over production, delivery, transport, use and disposal. On the other hand, ICT is considered a solution to reinforce environmental protection, mitigate the adverse impacts created in the environment by human activities and address key environmental challenges such as climate change and sustainability. This Research Topic aims to invite world-class cutting-edge research on how individuals, businesses, societies and governments adopt various types of ICT for enhancing diverse forms of economic and environmental sustainability, i.e. ecological, economic, social, cultural and political. Particularly, this Research Topic is devoted to addressing scholars from social sciences, business studies, energy research, economics research and environmental fields of research who are willing to combine strong theoretical underpinnings and world-class empirical evidence. Since the association between ICT diffusion and environmental sustainability is relatively new, less focused and evolving, there is a great need of understanding how ICT development can be harnessed for a thriving economy that takes care of its environmental impact. We welcome submissions on the topics listed below: Exploring the role of ICT in green growth prospects; Analysing the role of ICT development for environmental sustainability; Conceptualizing and exploring the role of ICT in the clean energy transition; Analysing the strengths of alternative measures of ICT; Analysing the role of smart cities for sustainability concerns; ICT diffusion for designing, facilitating and fostering sustainable economic

**Network Spread Models of Neurodegenerative Diseases** Ashish Raj, Yasser Iturria Medina, 2019-04-18 It is a real pleasure to introduce the excellent papers contributed by leading experts to our Research Topic proposing various network models of dementia spread The focus is strongly on disease specific mathematical modeling rather than general graph theory The emerging field of network neuroscience visualizes the brain as a graph consisting of nodes representing regions and edges as connections between them This complex network supports efficient communication along neural projections but also unfortunately the transmission and progression of Alzheimer's and other neurodegenerative disorders If we could know the brain's network organization could we then predict how degenerative processes might develop on this network As these papers demonstrate the answer is increasingly yes
