Achar,2021-09-27 Since its inception around 1980 the theory of perverse sheaves has been a vital tool of fundamental importance in geometric representation theory This book which aims to make this theory accessible to students and researchers is divided into two parts The first six chapters give a comprehensive account of constructible and perverse sheaves on complex algebraic varieties including such topics as Artin s vanishing theorem smooth descent and the nearby cycles functor This part of the book also has a chapter on the equivariant derived category and brief surveys of side topics including tale and adic sheaves D modules and algebraic stacks The last four chapters of the book show how to put this machinery to work in the context of selected topics in geometric representation theory Kazhdan Lusztig theory Springer theory the geometric Satake equivalence and canonical bases for quantum groups Recent developments such as the p canonical basis are also discussed The book has more than 250 exercises many of which focus on explicit calculations with concrete examples It also features a 4 page Quick Reference that summarizes the most commonly used facts for computations similar to a table of integrals in a calculus textbook Exceptional Child Education Abstracts ,1975

2-Dimensional Categories Niles Johnson,Donald Yau,2021 Category theory emerged in the 1940s in the work of Samuel Eilenberg and Saunders Mac Lane It describes relationships between mathematical structures Outside of pure mathematics category theory is an important tool in physics computer science linguistics and a quickly growing list of other sciences This book is about 2 dimensional categories which add an extra dimension of richness and complexity to category theory 2 Dimensional Categories is an introduction to 2 categories and bicategories assuming only the most elementary

aspects of category theory A review of basic category theory is followed by a systematic discussion of 2 bicategories pasting diagrams lax functors 2 bilimits the Duskin nerve 2 nerve internal adjunctions monads in bicategories 2 monads biequivalences the Bicategorical Yoneda Lemma and the Coherence Theorem for bicategories Grothendieck fibrations and the Grothendieck construction are discussed next followed by tricategories monoidal bicategories the Gray tensor product and double categories Completely detailed proofs of several fundamental but hard to find results are presented for the first time With exercises and plenty of motivation and explanation this book is useful for both beginners and experts [CIS Index](#) to U.S. Executive Branch Documents, 1910-1932 Congressional Information Service, 2001 [Serials Holdings](#) Linda Hall Library, 1983 **Union List of Periodicals and Periodic Serials in the Physical Sciences and Engineering at Purdue University** Purdue University.
