The Impact of Smoking on Population-Level Tuberculosis Outcomes Kristen M. Hassmiller,2006 **OBJECTIVE** In India TB kills more smokers than all types of cancer combined Substantial evidence links smoking and TB smokers are more susceptible to are spreading and dying from an infectious disease Research objectives are to estimate individual level increases in TB risks among smokers understand the underlying mechanisms by which smoking impacts TB risks estimate the impact of smoking on population level TB outcomes and to begin to investigate policy implications **METHODS** A compartmental model is developed to represent key aspects of TB transmission and disease progression and smoking is introduced based on a review of the impact of smoking on lung function immune response and social contact patterns Individual level effects of smoking are constrained by estimates of the unconditional relative risks of being infected developing TB and dying from TB for smokers compared to never smokers estimated in a meta analysis The model is used to estimate the population level impact of smoking on TB outcomes and the effect of tobacco and TB control policies on projected TB outcomes **RESULTS** Ever smokers are 1.7 95%CI 1.3 to 2.0 2.7 to 2.0 3.9 and 2.4 to 3.4 times more likely to be infected with M tuberculosis to develop TB and to die from TB respectively than never smokers It seems unlikely that these values could be produced unless smokers are more likely to become infected given exposure to M tuberculosis and to progress to disease given infection Translating these individual level effects to the population level when 29% of adults smoke the average in developing countries an estimated 60% of all incident TB disease 95%CI given uncertainty in TB dynamics 56 to 65% expected range given uncertainty in the underlying mechanisms 59 to 72% and 57% of TB deaths 52 to 62% 55 to 69% are attributable to smoking Among never smokers 42% of incident TB 36 to 48% 39 to 59% and 42% of TB mortality 36 to 48%

38 58% is attributable to smoking CONCLUSIONS Considering both the direct effects of smoking on individuals own health and the indirect effects of contagion smoking impacts population level TB outcomes substantially Fortunately smoking is an identifiable and modifiable risk factor Neglecting to control tobacco use could significantly offset strides made in TB control

An Anatomy of Witchcraft Oscar Di Simplicio,Martina Di Simplicio,2023-11-30 Much has been written on witchcraft by historians theologians philosophers and anthropologists but nothing by scientists This book aims to reappraise witchcraft by applying to it the advances in cognitive sciences The book is divided into four parts Part I Deep History deals with human emotions and the drive to represent witches as evil female agents Part II Historical Times focuses on those rare state and church repressions of malefice which surprisingly did not feature in Islamic lands Modern urbanization dealt a blow to the rural civilizations where accusations of witchcraft were rife Part III In the Laboratory applies neuroscience to specific case studies to investigate the personification of misfortune the millenary stereotype witch woman the reality of evil and the phenomenon of treasure hunting Part IV Millenials wonders whether intentional malefic hatred in a closed chapter in the history of humanity An Anatomy of Witchcraft is ideal reading for students and scholars Given its interdisciplinary nature the book will be of interest to scholars from many fields including evolutionary psychology anthropology women s history and cognitive sciences
