Handbook of Research on the Interplay Between Service Quality and Customer Delight Sarma, Sarmistha, Gupta, Neha, 2023-01-31 Research in the field of service quality and consumer behavior has developed in many dimensions in the past decade. A number of models have been developed to determine the factors leading to satisfaction; however, within the past few years, scholars have proved that satisfaction is not sufficient to leave a strong mark in the minds of the customers. Service quality and customer delight have been the buzzwords in the business world in recent times as scholars have proven that customer delight is the key to customer retention. The Handbook of Research on the Interplay Between Service Quality and Customer Delight considers how companies around the world in a cross-cultural environment are dealing with service quality and customer delight and proposes a global outlook on the current trends, tactics, and opportunities. Covering key topics such as buyer funnels, consumer dissonance, and digital solutions, this reference work is ideal for business owners, managers, industry professionals, researchers, scholars, practitioners, academicians, instructors, and students. **Innovation Dynamics and Policy in the Energy Sector** Milton L. Holloway, 2021-05-06 Innovation Dynamics and Policy in the Energy Sector discusses the process and future of global innovation in the energy sector based on the innovation leadership example of Texas. The book proposes that the positive dynamics of Texas energy sector innovations arise from a confluence of factors including supportive institutions, the management of technological change, competitive markets, astute public policy, intraindustrial collaboration, a cultural focus on change and risk-taking, and natural resource abundance. Heavily case study focused, chapters review the fundamental drivers of innovation from key discoveries at Spindletop, the proliferation of oil production through major field development, through electric sector deregulation and recent innovation in hydraulic fracturing, renewable integration, and carbon capture. The work closes to argue that sustainable global innovation addressing the twin challenges of climate change and the energy transition must be driven by the promotion of competition and risk-taking, which continually promotes the development of ideas, a process jointly funded by the public and private sectors and supported by collaborative and competitive institutions. Reviews the fundamental drivers of energy innovation and examines each driver through 10 key episodes in the Texas energy innovation experience, inclusive of guidance to the international research community based on their example. Establishes the critical impact of constructive energy policy, energy technology, and power markets in cultural settings that invite change and risk-taking and proposes them as key factors in building sustainable innovation. Consolidates current research and practice related to innovation from the perspectives of established economics and engineering and emergent innovation economics and econometrics disciplines.
