Graphical Construction of Wave Refraction Diagrams Joe William Johnson, Morrough Parker O'Brien, John Dove Isaacs, 1948      Algebraic Groups and Quantum Groups Susumu Ariki, 2012 This volume contains the proceedings of the tenth international conference on Representation Theory of Algebraic Groups and Quantum Groups held August 2-6 2010 at Nagoya University Nagoya Japan The survey articles and original papers contained in this volume offer a comprehensive view of current developments in the field Among others reflecting recent trends one central theme is research on representations in the affine case In three articles the authors study representations of  $W$  algebras and affine Lie algebras at the critical level and three other articles are related to crystals in the affine case that is Mirkovic-Vilonen polytopes for affine type  $A$  and Kerov-Kirillov-Reshetikhin type bijection for affine type  $E_6$  Other contributions cover a variety of topics such as modular representation theory of finite groups of Lie type quantum queer super Lie algebras Khovanov's arc algebra Hecke algebras and cyclotomic  $q$ -Schur algebras  $G_1T$ -Verma modules for reductive algebraic groups equivariant  $K$ -theory of quantum vector bundles and the cluster algebra This book is suitable for graduate students and researchers interested in geometric and combinatorial representation theory and other related fields      *Structural Members and Connections* George A. Seal, Walter Tholen, 2014-07-31 Monoidal Topology describes an active research area that after various past proposals on how to axiomatize spaces in terms of convergence began to emerge at the beginning of the millennium It combines Barr's relational presentation of topological spaces in terms of ultrafilter convergence with Lawvere's interpretation of metric spaces as small categories enriched over the extended real half line Hence equipped with a quantale  $V$  replacing the reals and a monad  $T$  replacing the ultrafilter monad laxly extended from set maps to  $V$ -valued relations the book develops a categorical theory of  $T$ - $V$  algebras that is inspired simultaneously by its metric and topological roots The book highlights in particular the distinguished role of equationally defined structures within the given lax algebraic context and presents numerous new results ranging from topology and approach theory to domain theory All the necessary prerequisites in order and category theory are presented in the book      **Phase Diagrams of Binary Tungsten Alloys** S.
