

# Intro to Science and Macromolecules

There isn't one way to design an experiment! However, this is the normal sequence:

1. Ask a question
2. Conduct background research
3. Construct a hypothesis
4. Test your hypothesis in an experiment
5. Analyze data
6. Draw conclusions and communicate them

**Independent Variable:** what the experimenter will deliberately change or manipulate in the investigation

- Usually on the x-axis of a graph

**Dependent Variable:** what changes in response to the independent variable

- On the y-axis of a graph
- what is measured

**Experimental Group:** group that is being experimented on. The group where you change the IV

**Control Group:** group used for comparison with your experimental groups. This is the "normal" group.

**Constants:** the aspects of an experiment that are held the same

**Correlation:** how the difference measured in the DV is caused only by the IV

**Characteristics of life:**

1. Made of cells
2. Have DNA/RNA
3. Reproduce
4. Use energy
5. Maintain Homeostasis
6. Respond to stimuli
7. Grow/develop
8. Evolve (as a population)

## Basic Chemistry:

Reactants: what you start with

Products: what you make

Protons: positive charge

Neutrons: no charge

Electrons: negative charge

Polar molecule: unequal sharing of electrons (one side is positive other side is negative)

Hydrophilic: loves water

because it is polar

Hydrophobic: hates water

because it is nonpolar

Main elements in living things:

CHNOPS: carbon, hydrogen,

nitrogen, oxygen, phosphorus,

sulfur, in that order
