**Making Library Websites Accessible** Laura Francabandera, 2018-05-25 Every person has the right to access information and the right to succeed regardless of their capabilities or the challenges they face These challenges can be even more difficult when accessing information online Libraries often adopt new web technologies in an effort to quickly and widely promote information access and education but they must always be aware that not all patrons are able to access those technologies in the same manner and at the same level Making Library Websites Accessible provides practical information on web accessibility specific to the processes and concerns of libraries It includes the basics of web accessibility standards laws and regulations as well as accessibility testing templates Features include Real life scenarios Checklists for accessibility testing Accessibility testing forms Guidelines for negotiations with library vendors

**Form Tester** Rahul Dixit, 2015 Whilst Model Based Testing MBT is an improvement over manual test specification the leap from manual testing to MBT can be hard Current MBT tools only allow development of models from scratch without reuse of existing manual test specifications Conversely current MBT tools do not facilitate partial automation of manual test cases e g to automate only the test initialization procedure Finally existing MBT tools do not identify areas of the system that are not testable due to defects which may in turn conceal other defects We propose a new MBT approach that addresses these shortcomings The approach uses a form oriented model that clearly represents the actions pages and fields of a web application Instead of having to specify a test model from scratch existing manual test cases can be used without modification as part of a test model specification This means that developers can move from manual testing to MBT without any additional cost Furthermore the approach allows developers to use test models to partially automate manual tests A test model can be used to automate the initialization step of manual test cases hence making it easier to specify manual tests Finally the proposed approach can identify areas of the application that are unreachable due to defects using an online testing strategy This provides an overview of all testable parts that have been covered as well as areas where additional defects may be concealed The approach was implemented in a novel MBT tool called FormTester and evaluated with real web applications One small and one mid sized application were tested using manually specified tests one large complex

application was automated using the MBT tool The tool's performance gains over manual specification were evaluated Manual test cases were used to specify the model and their test initializations were generated automatically This improved time spent developing test cases Minutes Test by about 30% The same types and similar numbers of defects were discovered using the tool as manual specification indicating a similar effectiveness in defect detection *Instructor's Manual for Glencoe Medical Terminology*, 2002
